Macroscale Models of Flow Through Highly Heterogeneous Porous Media M. Panfilov,2000-02-29 The book was planned in such a manner that two basic goals would be reached. On the one hand the goal was to show some new results in the field of modeling transport through highly heterogeneous media based on the homogenization theory. Multiple new mathematical models of transport are presented herein studying their properties developing methods to compute effective parameters of the averaged media simulation of cell problems using new models to simulate some practical problems. High heterogeneity being subjected to the homogenization procedure generates non local phenomena and then gives a possibility to develop a new non local or dynamic theory of transport
