Target NTSE Class 10 Stage 1 & 2 Solved Papers (2015 - 21) + 5 Mock Tests (MAT + SAT) 7th Edition Disha Experts, 2021-08-01 Target NTSE Class 10 Stage 1 & 2 Solved Papers (2015 - 19) + 5 Mock Tests (MAT + SAT) 6th Edition Disha Experts, 2019-07-19 Advances in Farm Animal Genomic Resources Stéphane Joost, Michael W. Bruford, Ino Curik, Juha Kantanen, Johannes A. Lenstra, Johann Sölkner, Göran Andersson, Philippe V. Baret, Nadine Buys, Jutta Roosen, Michèle Tixier-Boichard, Paolo Ajmone Marsan, 2016-01-28

The history of livestock started with the domestication of their wild ancestors a restricted number of species allowed to be tamed and entered a symbiotic relationship with humans In exchange for food shelter and protection they provided us with meat eggs hides wool and draught power thus contributing considerably to our economic and cultural development Depending on the species domestication took place in different areas and periods After domestication livestock spread over all inhabited regions of the earth accompanying human migrations and becoming also trade objects This required an adaptation to different climates and varying styles of husbandry and resulted in an enormous phenotypic diversity Approximately 200 years ago the situation started to change with the rise of the concept of breed Animals were selected for the same visible characteristics and crossing with different phenotypes was reduced This resulted in the formation of different breeds mostly genetically isolated from other populations A few decades ago selection pressure was increased again with intensive production focusing on a limited range of types and a subsequent loss of genetic diversity For short term economic reasons farmers have abandoned traditional breeds As a consequence during the 20th century at least 28% of farm animal breeds became extinct rare or endangered The situation is alarming in developing countries where native breeds adapted to local environments and diseases are being replaced by industrial breeds In the most marginal areas farm animals are considered to be essential for viable land use and in the developing world a major pathway out of poverty Historic documentation from the period before the breed formation is scarce Thus reconstruction of the history of livestock populations depends on archaeological archeo zoological and DNA analysis of extant populations Scientific research into genetic diversity takes advantage of the rapid advances in molecular genetics Studies of mitochondrial DNA microsatellite DNA profiling and Y chromosomes have revealed details on the process of domestication on the diversity retained by breeds and on relationships between breeds However we only see a small part of the genetic information and the advent of new technologies is most timely in order to answer many essential questions High throughput single nucleotide polymorphism genotyping is about to be available for all major farm animal species The recent development of sequencing techniques calls for new methods of data management and analysis and for new ideas for the extraction of information To make sense of this information in practical conditions integration of geo environmental and socio economic data are key elements The study and management of farm animal genomic resources FAnGR is indeed a major multidisciplinary issue The goal of the present Research Topic was to collect contributions of high scientific quality relevant

to biodiversity management and applying new methods to either new genomic and bioinformatics approaches for characterization of FAnGR to the development of FAnGR conservation methods applied ex situ and in situ to socio economic aspects of FAnGR conservation to transfer of lessons between wildlife and livestock biodiversity conservation and to the contribution of FAnGR to a transition in agriculture FAnGR and agro ecology **Minutes and Votes and Proceedings of the Parliament, with Papers Presented to Both Houses** Western Australia. Bull,Jill Margaret Farrant,Rita Hogan Mumm,Zerihen Tadele,2024-01-18 Orphan crops play an important role in food and nutrition security especially in growing economies where small holder farmers produce the majority of food Despite their importance in global agriculture and their often remarkable nutrient content and adaptation to challenging environmental conditions orphan crops have received limited attention by the scientific community and industry However the diversity of neglected plant species provides a large genetic resource that could significantly contribute to broadening the biodiversity of trait desired crops for novel value chains sustainable development and food security The uptake of new plant breeding techniques notably genome editing as well as omic tools are now accelerating translation of basic research and facilitating the exploration of orphan crops These advancements also give rise to public and politic engagement discussions to maximize socio economic impact Given that the greatest need for food and nutritional security is in growing economies issues of food sovereignty and sustainability of their food systems become front and centre There is now an exceptional opportunity to tackle some of the major current challenges in agriculture including climate change sustainable cropping systems food quality and nutritional security through broadening research in wild relatives of crops and on orphan species This Research Topic seeks to showcase research on neglected plants using advanced molecular technologies e g genome sequencing omics etc and new plant breeding approaches methods and tools This Research Topic will also discuss the challenges and opportunities arising when modern breeding techniques are applied for translational research *Smart Education in China and Central & Eastern European Countries* Rongxia Zhuang,Dejian Liu,Demetrios Sampson,Danimir Mandic,Siyi Zou,Yu Huang,Ronghuai Huang,2023-01-30 This book focuses on the development of smart education in China and some countries of Central and Eastern Europe A brief discussion on the idea of smart education was given in the introduction chapter followed

by a series of national smart education profiles of eleven countries In detail the profile starts with an overview of ICT in Education or smart education in the country and policies of ICT in Education or smart education Some key features of smart education in each country were discussed with examples of best practices The profile ends with a description of trends of smart education in the country Based on the information above the final chapter presents an analysis among the eleven countries with six major features they presented and concluded the book with suggestions on advancing smart education by three points

Coffee certification in East Africa: impact on farms, families and cooperatives Ruerd Ruben, Paul Hoebink, 2023-09-04 Certification of coffee producers is frequently suggested as a promising strategy for improving the position of smallholder farmers in the market After the launch of the first Fairtrade label in 1988 several other standards have been promoted either by voluntary agencies Utz certified or by private coffee companies Each coffee label relies on different strategies for enhancing sustainable production and responsible trade Coffee certification in East Africa is of a rather recent nature but has been rapidly expanding representing currently 26 percent of the world's sustainable certified coffee supply Marketing channels cooperative organisation and household structures show notable differences between Kenya Uganda and Ethiopia Empirical studies on the effects of standards for smallholders are scarce This book intends to deepen our understanding on the role and functions of coffee certification regimes based on three innovative approaches 1 longitudinal field survey data capturing changes in coffee farming systems and effects on household welfare 2 in depth interviews and behavioural experiments regarding risk attitudes trust and investments at cooperative level and 3 detailed discourse analyses regarding gender roles and female bargaining power within coffee households The chapters included in this book provide new and original evidence about the impact of coffee certification based on large scale field surveys and in depth interviews

Microbial Responses to Environmental Changes Jürg B. Logue, Stuart E. G. Findlay, Jérôme Comte, 2016-01-20 Advances in next generation sequencing technologies omics and bioinformatics are revealing a tremendous and unsuspected diversity of microbes both at a compositional and functional level Moreover the expansion of ecological concepts into microbial ecology has greatly advanced our comprehension of the role microbes play in the functioning of ecosystems across a wide range of biomes Super imposed on this new information about microbes their functions and how they are organized environmental gradients are changing rapidly largely driven by direct and indirect human activities In the context of global change understanding the mechanisms that shape microbial communities is pivotal to predict microbial responses to novel selective forces and their implications at the local as well as global scale One of the main features of microbial communities is their ability to react to changes in the environment Thus many studies have reported changes in the performance and composition of communities along environmental gradients However the mechanisms underlying these responses remain unclear It is assumed that the response of microbes to changes in the environment is mediated by a complex combination of shifts in the physiological properties single cell activities or

composition of communities it may occur by means of physiological adjustments of the taxa present in a community or selecting towards more tolerant better adapted phylotypes Knowing whether certain factors trigger one many or all mechanisms would greatly increase confidence in predictions of future microbial composition and processes This Research Topic brings together studies that applied the latest molecular techniques for studying microbial composition and functioning and integrated ecological biogeochemical and or modeling approaches to provide a comprehensive and mechanistic perspective of the responses of micro organisms to environmental changes This Research Topic presents new findings on environmental parameters influencing microbial communities the type and magnitude of response and differences in the response among microbial groups and which collectively deepen our current understanding and knowledge of the underlying mechanisms of microbial structural and functional responses to environmental changes and gradients in both aquatic and terrestrial ecosystems The body of work has furthermore identified many challenges and questions that yet remain to be addressed and new perspectives to follow up on Exposure, Risks, and Drivers of the Mobile Antimicrobial Resistance Genes in the Environment - a Global Perspective Abasiofiok Mark Ibekwe,Lisa M.
