Productivity in Higher Education Caroline M. Hoxby, Kevin Stange, 2020-01-10 How do the benefits of higher education compare with its costs and how does this comparison vary across individuals and institutions These questions are fundamental to quantifying the productivity of the education sector The studies in Productivity in Higher Education use rich and novel administrative data modern econometric methods and careful institutional analysis to explore productivity issues The authors examine the returns to undergraduate education differences in costs by major the productivity of for profit schools the productivity of various types of faculty and of outcomes the effects of online education on the higher education market and the ways in which the productivity of different institutions responds to market forces The analyses recognize five key challenges to assessing productivity in higher education the potential for multiple student outcomes in terms of skills earnings invention and employment the fact that colleges and universities are multiproduct firms that conduct varied activities across many domains the fact that students select which school to attend based in part on their aptitude the difficulty of attributing outcomes to individual institutions when students attend more than one and the possibility that some of the benefits of higher education may arise from the system as a whole rather than

from a single institution The findings and the approaches illustrated can facilitate decision making processes in higher education

Inequality and Fiscal Policy Mr.Benedict J. Clements,Ruud A. de Mooij,Mr.Sanjeev Gupta,Mr.Michael Keen,2015-09-21 The sizeable increase in income inequality experienced in advanced economies and many parts of the world since the 1990s and the severe consequences of the global economic and financial crisis have brought distributional issues to the top of the policy agenda The challenge for many governments is to address concerns over rising inequality while simultaneously promoting economic efficiency and more robust economic growth The book delves into this discussion by analyzing fiscal policy and its link with inequality Fiscal policy is the government s most powerful tool for addressing inequality It affects households consumption directly through taxes and transfers and indirectly via incentives for work and production and the provision of public goods and individual services such as education and health An important message of the book is that growth and equity are not necessarily at odds with the appropriate mix of policy instruments and careful policy design countries can in many cases achieve better distributional outcomes and improve economic efficiency Country studies on the Netherlands China India Republic of Congo and Brazil demonstrate the diversity of challenges across countries and their differing capacity to use fiscal policy for redistribution The analysis presented in the book builds on and extends work done at the IMF and also includes contributions from leading academics

Marx in the Field Alessandra Mezzadri, 2021-02-15 Marx in the Field is a unique edited collection illustrating the relevance of the Marxian method to study contemporary capitalism and the global development process Essays in the collection bring Marx to the field in three ways They illustrate how Marxian categories can be concretely deployed for field research in the global economy they analyse how these categories may be adapted during fieldwork and they discuss data collection methods supporting Marxian analysis Crucially many of the contributions expand the scope of Marxian analysis by combining its insights with those of other intellectual traditions including radical feminisms critical realism and postcolonial studies The book defines the possibilities and challenges of fieldwork guided by Marxian analysis including those emerging from the COVID 19 pandemic The collection takes a global approach to the study of development and of contemporary capitalism While some essays focus on themes and geographical areas of long term concern for international development like informal or rural poverty and work across South Asia Southern and West Africa or South America others focus instead on actors benefitting from the development process like regional exporters larger farmers and traders or on unequal socio economic outcomes across richer and emerging economies and regions including Gulf countries North America Southern Europe or Post Soviet Central and Eastern Europe Some essays explore global processes cutting across the world economy connecting multiple regions actors and inequalities While some of the contributions focus on classic Marxian tropes in the study of contemporary capitalism like class labour and working conditions agrarian change or global commodity chains and prices others aim at demonstrating the relevance of the Marxian method beyond its traditional boundaries for instance for exploring the interplays between food nutrition and poverty the links between social reproduction gender and homework the features of migration and refugees regimes tribal chieftaincy structures or prison labour or the dynamics structuring global surrogacy Overall through the analysis of an extremely varied set of concrete settings and cases this book illustrates the extraordinary insights we can gain by bringing Marx in the field

Value and Unequal Exchange in International Trade Andrea Ricci, 2021-05-19 Contrary to the claims made by neoliberal governments and mainstream academics this book argues that the huge increase in trade in recent decades has not made the world a fairer place instead the age of globalization has become a time of mass migration caused by increasing global inequality The theory of unequal

exchange challenges the free trade doctrine claiming that transfers of value from poorer to richer countries are hidden behind apparently equivalent market transactions Following a critical review of the existing approaches the book proposes a general theory of unequal exchange in the light of an innovative reconstruction of Marx's international law of value in which money and exchange rates play a crucial role in decoupling value captured from value produced by different countries even in perfectly competitive world markets On this theoretical basis the book provides an empirical analysis of the international transfers of value in both traditional trade and Global Value Chains The resulting world mapping of unequal exchange shows the geographical hierarchy of capital global exploitation by revealing a world divided into two quite separate camps of donor and receiving countries the former being the poorer countries and the latter the richer countries This book is addressed to scholars and students of economics and social sciences as well as activists of the North and the South interested in a better understanding of the asymmetric power relations implied in global trade It makes a significant contribution to the literature on political economy trade Marxism international relations and economic geography
