On the Differential Structure of Metric Measure Spaces and Applications Nicola Gigli,2015-06-26 The main goals of this paper are i To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions This will be achieved without calling into play any sort of analysis in charts our assumptions being the metric space is complete and separable and the measure is Radon and non negative ii To employ these notions of calculus to provide via integration by parts a general definition of distributional Laplacian thus giving a meaning to an expression like where is a function and is a measure iii To show that on spaces with Ricci curvature bounded from below and dimension bounded from above the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian a situation which is analyzed in detail

Degree Spectra of Relations on a Cone Matthew Harrison-Trainor,2018-05-29 Let $\mathcal{A}$ be a mathematical structure with an additional relation R The author is interested in the degree spectrum of R either among computable copies of $\mathcal{A}$ when $\mathcal{A} \models R$ is a natural structure or to make this rigorous among copies of $\mathcal{A}$ R computable in a large degree d He introduces the partial order of degree spectra on a cone and begin the study of these objects Using a result of Harizanov that assuming an effectiveness condition on $\mathcal{A}$ and R if R is not intrinsically computable then its degree spectrum contains all $c \leq e$ degrees the author shows that there is a minimal non trivial degree spectrum on a cone consisting of the $c \leq e$ degrees

Cluster Algebras and Triangulated Surfaces Part II: Lambda Lengths Sergey Fomin, Professor Dylan Thurston, 2018-10-03 For any cluster algebra whose underlying combinatorial data can be encoded by a bordered surface with marked points the authors construct a geometric realization in terms of suitable decorated Teichmüller space of the surface On the geometric side this requires opening the surface at each interior marked point into an additional geodesic boundary component On the algebraic side it relies on the notion of a non

normalized cluster algebra and the machinery of tropical lambda lengths The authors model allows for an arbitrary choice of coefficients which translates into a choice of a family of integral laminations on the surface It provides an intrinsic interpretation of cluster variables as renormalized lambda lengths of arcs on the surface Exchange relations are written in terms of the shear coordinates of the laminations and are interpreted as generalized Ptolemy relations for lambda lengths This approach gives alternative proofs for the main structural results from the authors previous paper removing unnecessary assumptions on the surface

Assessment of Feigned Cognitive Impairment, Second Edition Kyle Brauer Boone,2021-06-04 The go to

resource for clinical and forensic practice has now been significantly revised with 85% new material reflecting the tremendous growth of the field. Leading authorities synthesize the state of the science on symptom feigning in cognitive testing and present evidence based recommendations for distinguishing between credible and noncredible performance. A wide range of performance validity tests (PVTs) and symptom validity tests (SVTs) are critically reviewed and guidelines provided for applying them across differing cognitive domains and medical neurological and psychiatric conditions. The book also covers validity testing in forensic settings and with particular populations such as ethnic and linguistic minority group members. New to This Edition: Numerous new authors; a greatly expanded range of topics and the latest data throughout. Clinical primer chapter on how to select and interpret appropriate PVTs. Chapters on methods for validity testing in visual spatial processing speed and language domains and with cognitive screening instruments and personality inventories. Chapter on methods for interpreting multiple PVTs in combination. Chapters on additional populations: military personnel, children and adolescents and clinical problems: dementia, somatoform conversion disorder. Chapters on research methods for validating PVTs, base rates of feigned mild traumatic brain injury and more.

Mathematics for Equity Na'ilah Suad Nasir, Carlos Cabana, Barbara Shreve, Estelle Woodbury, Nicole Louie, 2014-12-04. In this book, nationally renowned scholars join classroom teachers to share equity oriented approaches that have been successful with urban high school mathematics students. Compiling for the first time major research findings and practitioner experiences from Railside High School, the volume describes the evolution of a fundamentally different conception of learners and teaching. The chapters bring together research and reflection on teacher collaboration and professional community, student outcomes and mathematics classroom culture, reform curricula and pedagogy and ongoing teacher development. *Mathematics for Equity* will be invaluable reading for teachers, schools and districts interested in maintaining a focus on equity and improving student learning while making sense of the new demands of the Common Core State Standards. Book Features: Core principles of an equity centered mathematics program. Examples of how to focus and organize the collaborative work of a math department to develop a shared pedagogy. Student experiences with an equity pedagogy that focuses on building perseverance, flexibility in thinking and deep conceptual understanding. Connections between reconceptualizing learners and teaching and achieving deep mathematics learning and equitable outcomes. Contributors include Jo Boaler, Ilana Seidel, Horn, Judith Warren Little and Rachel Lotan. *Mathematics for Equity* provides a kaleidoscopic view in the voices of teachers, researchers and students themselves of one of the nation's most ambitious and successful attempts at teaching mathematics for equity. It shows what it takes to create a climate that supports students and teachers in engaging in meaningful mathematical activity and, alas, how vulnerable such environments are to the wrong kinds of accountability. Read it and learn. Alan H. Schoenfeld, University of California at Berkeley. Want to fix what's wrong with mathematics instruction in your school? Read this book with your colleagues and do what it inspires you to do. Written by the brave teachers and former students who did it as well as

Foundations of Theoretical Approaches in Systems Biology Alberto Marin-Sanguino, Julio Vera, Rui Alves, 2019-01-11 If biology in the 20th century was characterized by an explosion of new technologies and experimental methods that of the 21st has seen an equally exuberant proliferation of mathematical and computational methods that attempt to systematize and explain the abundance of available data As we live through the consolidation of a new paradigm where experimental data goes hand in hand with computational analysis we contemplate the challenge of fusing these two aspects of the new biology into a consistent theoretical framework Whether systems biology will survive as a field or be washed away by the tides of future fads will ultimately depend on its success to achieve this type of synthesis The famous quote attributed to Kurt Lewin comes

to mind there is nothing more practical than a good theory This book presents a wide assortment of articles on systems biology in an attempt to capture the variety of current methods in systems biology and show how they can help to find answers to the challenges of modern biology
