Kotsireas,Temur Kutsia,Dimitris E. Simos,2017-12-20 This book constitutes the refereed proceedings of the 7th International Conference on Mathematical Aspects of Computer and Information Sciences MACIS 2017 held in Vienna Austria in November 2017 The 28 revised papers and 8 short papers presented were carefully reviewed and selected from 67 submissions The papers are organized in the following topical sections foundation of algorithms in mathematics engineering and scientific computation combinatorics and codes in computer science data modeling and analysis and mathematical aspects of information security and cryptography **Granular, Fuzzy, and Soft Computing** Tsau-Young Lin,Churn-Jung Liao,Janusz Kacprzyk,2023-03-29 The first edition of the Encyclopedia of Complexity and Systems Science ECSS 2009 presented a comprehensive overview of granular computing GrC broadly divided into several categories Granular computing from rough set theory Granular Computing in Database Theory Granular Computing in Social Networks Granular Computing and Fuzzy Set Theory Grid Cloud Computing as well as general issues in granular computing

In 2011 the formal theory of GrC was established providing an adequate infrastructure to support revolutionary new approaches to computer data science including the challenges presented by so called big data For this volume of ECSS Second Edition many entries have been updated to capture these new developments together with new chapters on such topics as data clustering outliers in data mining qualitative fuzzy sets and information flow analysis for security applications Granulations can be seen as a natural and ancient methodology deeply rooted in the human mind Many daily things are routinely granulated into sub things The topography of earth is granulated into hills plateaus etc space and time are granulated into infinitesimal granules and a circle is granulated into polygons of infinitesimal sides Such granules led to the invention of calculus topology and non standard analysis Formalization of general granulation was difficult but as shown in this volume great progress has been made in combining discrete and continuous mathematics under one roof for a broad range of applications in data science Analysis, Modelling, Optimization, and Numerical Techniques Gerard Olivar Tost, Olga Vasilieva, 2015-03-18 This book highlights recent compelling research results and trends in various aspects of contemporary mathematics emphasizing applicabilities to real world situations The chapters present exciting new findings and developments in situations where mathematical rigor is combined with common sense A multi disciplinary approach both within each chapter and in the volume as a whole leads to practical insights that may result in a more synthetic understanding of specific global issues as well as their possible solutions The volume will be of interest not only to experts in mathematics but also to graduate students scientists and practitioners from other fields including physics biology geology management and medicine *Brainlesion: Glioma, Multiple Sclerosis, Stroke and Traumatic Brain Injuries* Alessandro Crimi, Spyridon Bakas, 2021-03-25 This two volume set LNCS 12658 and 12659 constitutes the thoroughly refereed proceedings of the 6th International MICCAI Brainlesion Workshop BrainLes 2020 the International Multimodal Brain Tumor Segmentation BraTS challenge and the Computational Precision Medicine Radiology Pathology Challenge on Brain Tumor Classification CPM RadPath challenge These were held jointly at the 23rd Medical Image Computing for Computer Assisted Intervention Conference MICCAI 2020 in Lima Peru in October 2020 The revised selected papers presented in these volumes were organized in the following topical sections brain lesion image analysis 16 selected papers from 21 submissions brain tumor image segmentation 69 selected papers from 75 submissions and computational precision medicine radiology pathology challenge on brain tumor classification 6 selected papers from 6 submissions The workshop and challenges were held virtually "Dig Where You Stand" 7 Kristín Bjarnadóttir, Fulvia Furinghetti, Alexander Karp, Johan Prytz, Gert Schubring, Ysette Weiss, Joerg Zender, 2023-10-31 The history of mathematics education is an interdisciplinary research area that is experiencing a significant development and this book presents recent work in this area This book is the result of the seventh conference ICHME International Conference on the History of Mathematics Education that took place at Erbacher Hof Mainz Germany from 19th to 23rd of September 2022 Nowadays the history of education is of the utmost importance for

assessing the general development of the educational systems in which mathematics education occurs. Usually the history of education is confined to history within a given civilization, country or nation. However, the quality of the research for a given nation is enhanced when situated among various specific cases and comparative studies provide essential tools to broaden the perspectives to an international level. Moreover, mathematics as a school discipline has always functioned at the crossroads between general education and professional training, thus relating its teaching history to professional working environments as well. The 24 chapters in this book reflect this wide area of research. *COVID-19: Integrating Artificial Intelligence, Data Science, Mathematics, Medicine and Public Health, Epidemiology, Neuroscience, Neurorobotics, and Biomedical Science in Pandemic Management, volume II* Atefeh Abedini, Reza Lashgari, 2024-02-29 **Empowering**

Science and Mathematics for Global Competitiveness Yuli Rahmawati, Peter Taylor, 2019-06-07 This conference proceedings focuses on enabling science and mathematics practitioners and citizens to respond to the pressing challenges of global competitiveness and sustainable development by transforming research and teaching of science and mathematics. The proceedings consist of 82 papers presented at the Science and Mathematics International Conference SMIC 2018 organised by the Faculty of Mathematics and Natural Sciences Universitas Negeri Jakarta Indonesia. The proceedings are organised in four parts: Science, Science Education, Mathematics, and Mathematics Education. The papers contribute to our understanding of important contemporary issues in science, especially nanotechnology, materials, and environmental science; science education in particular; environmental sustainability; STEM and STEAM education; 21st century skills; technology education; and green chemistry and mathematics and its application in statistics, computer science, and mathematics education.

Introduction to Lattice Theory with Computer Science Applications Vijay K. Garg, 2015-05-26 A computational perspective on partial order and lattice theory focusing on algorithms and their applications. This book provides a uniform treatment of the theory and applications of lattice theory. The applications covered include tracking dependency in distributed systems, combinatorics, detecting global predicates in distributed systems, set families, and integer partitions. The book presents algorithmic proofs of theorems whenever possible. These proofs are written in the calculational style advocated by Dijkstra with arguments explicitly spelled out step by step. The author's intent is for readers to learn not only the proofs but the heuristics that guide said proofs. *Introduction to Lattice Theory with Computer Science Applications* Examines posets, Dilworth's theorem, merging algorithms, lattices, lattice completion, morphisms, modular and distributive lattices, slicing, interval orders, tractable posets, lattice enumeration algorithms, and dimension theory. Provides end of chapter exercises to help readers retain newfound knowledge on each subject. Includes supplementary material at www.ece.utexas.edu/garg. *Introduction to Lattice Theory with Computer Science Applications* is written for students of computer science as well as practicing mathematicians. *Network Spread Models of Neurodegenerative Diseases* Ashish Raj, Yasser Iturria Medina, 2019-04-18 It is a real pleasure to introduce the excellent papers contributed by leading experts to our Research

Topic proposing various network models of dementia spread The focus is strongly on disease specific mathematical modeling rather than general graph theory The emerging field of network neuroscience visualizes the brain as a graph consisting of nodes representing regions and edges as connections between them This complex network supports efficient communication along neural projections but also unfortunately the transmission and progression of Alzheimer s and other neurodegenerative disorders If we could know the brain s network organization could we then predict how degenerative processes might develop on this network As these papers demonstrate the answer is increasingly yes
