Bibliometrics and Research Evaluation Yves Gingras, 2016-10-07 Why bibliometrics is useful for understanding the global dynamics of science but generate perverse effects when applied inappropriately in research evaluation and university rankings The research evaluation market is booming Ranking metrics h index and impact factors are reigning buzzwords Government and research administrators want to evaluate everything teachers professors training programs universities using quantitative indicators Among the tools used to measure research excellence bibliometrics aggregate data on publications and citations has become dominant Bibliometrics is hailed as an objective measure of research quality a quantitative measure more useful than subjective and intuitive evaluation methods such as peer review that have been used since scientific papers were first published in the seventeenth century In this book Yves Gingras offers a spirited argument against an unquestioning reliance on bibliometrics as an indicator of research quality Gingras shows that bibliometric rankings have no real scientific validity rarely measuring what they pretend to Although the study of publication and citation patterns at the proper scales can yield insights on the global dynamics of science over time ill defined quantitative indicators often generate perverse and unintended effects on the direction of research Moreover abuse of bibliometrics occurs when data is manipulated to boost rankings Gingras looks at the politics of evaluation and argues that

using numbers can be a way to control scientists and diminish their autonomy in the evaluation process Proposing precise criteria for establishing the validity of indicators at a given scale of analysis Gingras questions why universities are so eager to let invalid indicators influence their research strategy
