In Volume 3, Eliot R. Smith of Purdue University proposes that social cognition theorists have placed excessive emphasis on the role of schemata, prototypes, and various other types of abstractions. This has affected both the methodologies they use and the type of theories they construct. What has not been adequately appreciated is the storage and retrieval of specific episodes, especially those with idiosyncratic features. This volume is designed as a required text for those studying personality, experimental and consumer psychology, cognitive science, and communications.

Election 2014

Ed Kilgore, 2015-02-05 The Republican party overwhelmingly carried the midterm elections of 2014, winning nearly every

contested congressional and gubernatorial seat and taking the Senate after eight years of Democratic control Many have characterized this sweep as a sign of a fundamental political shift toward the GOP But acclaimed political commentator Ed Kilgore argues that the results of the midterm elections were a predictable outcome that was less an ideological watershed than the culmination of several long term cyclical and historical trends Election 2014 strips down conflicting and biased political narratives to present an accessible account of how and why Republicans triumphed so decisively Kilgore crunches electoral data and evaluates such structural factors as the economy presidential approval ratings and voter turnout patterns Ultimately this bracing analysis sheds light on the election s implications for the future direction of American politics

When Things Don't Fall Apart Ilene Grabel,2019-08-06 An account of the significant though gradual uneven disconnected ad hoc and pragmatic innovations in global financial governance and developmental finance induced by the global financial crisis In When Things Don t Fall Apart Ilene Grabel challenges the dominant view that the global financial

crisis had little effect on global financial governance and developmental finance. Most observers discount all but grand systemic ruptures in institutions and policy. Grabel argues instead that the global crisis induced inconsistent and ad hoc discontinuities in global financial governance and developmental finance that are now having profound effects on emerging market and developing economies. Grabel's chief normative claim is that the resulting incoherence in global financial governance is productive rather than debilitating. In the age of productive incoherence, a more complex, dense, fragmented and pluripolar form of global financial governance is expanding possibilities for policy and institutional experimentation, policy space for economic and human development, financial stability and resilience, and financial inclusion. Grabel draws on key theoretical commitments of Albert Hirschman to cement the case for the productivity of incoherence. Inspired by Hirschman, Grabel demonstrates that meaningful change often emerges from disconnected, erratic, experimental and inconsistent adjustments in institutions and policies as actors pragmatically manage in an evolving world. Grabel substantiates her claims with empirically rich case studies that explore the effects of recent crises on networks of financial governance, such as the G 20 transformations within the IMF, institutional innovations in liquidity support and project finance from the national to the transregional levels, and the rebranding of capital controls. Grabel concludes with a careful examination of the opportunities and risks associated with the evolutionary transformations underway.

Transatlantic Memories of Slavery, 2015-08-10. While the memorialization of slavery has generated an impressive number of publications, relatively few studies deal with this subject from a transnational, transdisciplinary and transracial standpoint. As a historical phenomenon that crossed borders and traversed national communities and ethnic groups, producing alliances that did not overlap with received identities, slavery as well as its memory call for comparative investigations that may bring to light aspects obscured by the predominant visibility of US American and British narratives of the past. This study addresses the memory of slavery from a transnational perspective. It brings into dialogue texts and practices from the transatlantic world, offering comparative analyses which interlace the variety of memories emerging in diverse national contexts and fields of study, and shed light on the ways local counter-memories have interacted with and responded to hegemonic narratives of slavery. The inclusion of Brazil and the French, English and Spanish Caribbean alongside the United States and Europe, and the variety of investigative approaches ranging from cinema, popular culture and visual culture studies to anthropology and literary studies, expand the current understanding of the slave past and how it is reimagined today. This fascinating book brings freshness to the topic by considering objects of investigation which have so far remained marginal in the academic debate, such as heroic memorials, civic landscape, white family sagas, Young Adult literature of slavery, Latin American telenovelas and filmic narrations within and beyond Hollywood. What emerges is a multifarious set of memories which keep changing according to generation, race, gender, nation and political

urgency and indicate the advancing of a dynamic mobilized memorialization of slavery willing to move beyond mourning towards a more militant stand for justice This is an important book for those interested in African American American and Latin American studies and working across literature cinema visual arts and public culture It will also be useful to public official and civil servants interested in the question of slavery and its present memory **Making the Unipolar Moment**

Hal Brands,2016-05-12 In the late 1970s the United States often seemed to be a superpower in decline Battered by crises and setbacks around the globe its post World War II international leadership appeared to be draining steadily away Yet just over a decade later by the early 1990s America s global primacy had been reasserted in dramatic fashion The Cold War had ended with Washington and its allies triumphant democracy and free markets were spreading like never before The United States was now enjoying its unipolar moment an era in which Washington faced no near term rivals for global power and influence and one in which the defining feature of international politics was American dominance How did this remarkable turnaround occur and what role did U S foreign policy play in causing it In this important book Hal Brands uses recently declassified archival materials to tell the story of American resurgence Brands weaves together the key threads of global change and U S policy from the late 1970s through the early 1990s examining the Cold War struggle with Moscow the rise of a more integrated and globalized world economy the rapid advance of human rights and democracy and the emergence of new global challenges like Islamic extremism and international terrorism Brands reveals how deep structural changes in the international system interacted with strategies pursued by Jimmy Carter Ronald Reagan and George H W Bush to usher in an era of reinvigorated and in many ways unprecedented American primacy Making the Unipolar Moment provides an indispensable account of how the post Cold War order that we still inhabit came to be *Situational Analysis* Adele E.

Clay Reid,2015-11-18 Vision is the process of extracting behaviorally relevant information from patterns of light that fall on retina as the eyes sample the outside world Traditionally nonhuman primates macaque monkeys in particular have been viewed by many as the animal model of choice for investigating the neuronal substrates of visual processing not only because their visual systems closely mirror our own but also because it is often assumed that simpler brains lack advanced visual processing machinery However this narrow view of visual neuroscience ignores the fact that vision is widely distributed throughout the animal kingdom

enabling a wide repertoire of complex behaviors in species from insects to birds fish and mammals Recent years have seen a resurgence of interest in alternative animal models for vision research especially rodents This resurgence is partly due to the availability of increasingly powerful experimental approaches e g optogenetics and two photon imaging that are challenging to apply to their full potential in primates Meanwhile even more phylogenetically distant species such as birds fish and insects have long been workhorse animal models for gaining insight into the core computations underlying visual processing In many cases these animal models are valuable precisely because their visual systems are simpler than the primate visual system Simpler systems are often easier to understand and studying a diversity of neuronal systems that achieve similar functions can focus attention on those computational principles that are universal and essential This Research Topic provides a survey of the state of the art in the use of animal models of visual functions that are alternative to macaques It includes original research methods articles reviews and opinions that exploit a variety of animal models including rodents birds fishes and insects as well as small New World monkey the marmoset to investigate visual function The experimental approaches covered by these studies range from psychophysics and electrophysiology to histology and genetics testifying to the richness and depth of visual neuroscience in non macaque species
