Archaeological and Historical Considerations Gary M. Feinman,Richard Edward Blanton,Stephen A. Kowalewski,Lane Fargher Navarro,2022-10-05 Until recently scholarly consensus across the social sciences and history adhered to the view that the incorporation of citizen voice in governance e g democracy was an entirely Western phenomenon that mostly is a product of the emergence of rational thought and the modern world These views are now empirically questioned and subject to serious reconsideration Yet even researchers who recognize a broader temporal span for democratic or good governance draw fundamental distinctions between these political forms in the past and present Building on the collective action theories in particular those focused on fiscal financing the editors of this Research Topic outline fundamental characteristics internal financing equitable taxation checks on power and a functioning bureaucracy at the core of good governance which are neither the sole project of the contemporary West nor tied to any specific ideological construct or form of leadership Even elections can no longer be conceived as assurance of good governance At this time of global challenges to democracy understanding the comparative history of good governments their core institutions how they worked their foundations what led to their downfalls and the factors that prompted their sustenance or their collapses are extremely important to document The historical trends and coactive processes that underpinned those human cooperative arrangements which fostered growth and general well being require comparative focus if we are to draw on the wealth of human history to help craft better

governance in the future and forestall the tripwires that lead to its failures We welcome contributions which focus on Diachronic examinations of changes in the fiscal foundations of governance and their impacts on governance Comparative analysis of governmental variability and its relationship to collective action and its fiscal financing Cross temporal studies of shifts in the degree of good governance and relations to inequality sustainability bureaucracy public goods and services and fiscal financing The importance of social compacts and contracts in representative government and how these are sustained and break down Alternatives and supplements to elections as means of assessing subaltern voices The relationship between governance and inequality over time and across space Differences in modes of political collapse and their relationship to governance fiscal financing and responses of principals The role of public ritual in good versus autocratic governments Variance in communication and computation in good versus autocratic governments The relationship between comparative governance and the uses and spatial distributions of community urban space residential and non residential architecture sprawl versus compact settlement The relationship between comparative governance and neighborhood organization Was there one or many episodes of enlightenment The relationship between governance and coercive processes including considerations of demographic growth patterns of migration well being economic growth The relationship between slave labor and governance spot resources and governance Non hierarchical and egalitarian forms of governance in non state societies Indigenous inspirations and influences on the Constitution of the United States Collective action and establishment of early cities Our aim for this Research Topic is to compile a series of research essays drawn from a broad cross regional and cross temporal sample of historical settings to explore issues and themes relevant to the history and processes that have been at the heart of good governance

Food Festivals and Local Development in Italy Michele Filippo Fontefrancesco, 2020-10-27 What does the proliferation of food festival tell us about rural areas How can these celebrations pave the way to a better future for the local communities This book is addressing these questions contributing to the ongoing debate about the future of rural peripheries in Europe The volume is based on the ethnographic research conducted in Italy a country internationally known for its food tradition and one of the European countries where the gap between rural and urban space is most pronounced It offers an anthropological analysis of food festivals exploring the transformational role they have to change and develop rural communities Although the festivals aim mostly at tourism they contribute in a wider way to the life of the rural communities acting as devices through which a community redefines itself reinforces its sociality reshapes the perception and use of the surrounding environment In so doing thus the books suggests to read the festivals not just as celebrations driven by food fashion but rather fundamental grassroots instruments to contrast the effects of rural marginalization and pave the way to a possible better future for the community

Larkum,Gary A. Kendrick,Peter J. Ralph,2018-07-27 This book takes the place of *Biology of Seagrasses A Treatise on the Biology of Seagrasses with Special Reference to the Australian Region* co edited by A W D Larkum A J MaCComb and S A Shepherd and published by Elsevier in 1989 The first book has been influential but it is now 25 years since it was published and seagrass studies have progressed and developed considerably since then The design of the current book follows in the steps of the first book There are chapters on taxonomy floral biology biogeography and regional studies The regional studies emphasize the importance of Australia having over half of the world s 62 species including some ten species published for Australia since the previous book There are a number of chapters on ecology and biogeography fish biology and fisheries and dugong biology are prominent chapters Physiological aspects again play an important part including new knowledge on the role of hydrogen sulphide in sediments and on photosynthetic processes Climate change pollution and environmental degradation this time gain an even more important part of the book Decline of seagrasses around Australia are also discussed in detail in several chapters Since the first book was published two new areas have received special attention blue carbon and genomic studies Seagrasses are now known to be a very important player in the formation of blue carbon i e carbon that has a long turnover time in soils and sediments Alongside salt marshes and mangroves seagrasses are now recognized as playing a very important role in the formation of blue carbon And because Australia has such an abundance and variety of

seagrasses their role in blue carbon production and turnover is of great importance The first whole genomes of seagrasses are now available and Australia has played an important role here It appears that seagrasses have several different suites of genes as compared with other land plants and even in comparison with freshwater hydrophytes This difference is leading to important molecular biological studies where the new knowledge will be important to the understanding and conservation of seagrass ecosystems in Australia Thus by reason of its natural abundance of diverse seagrasses and a sophisticated seagrass research community in Australia it is possible to produce a book which will be attractive to marine biologists coastal scientists and conservationists from many countries around the world
