Assessment and Teaching of 21st Century Skills Esther Care, Patrick Griffin, Mark Wilson, 2017-11-07 This book provides a detailed description of research and application outcomes from the Assessment and Teaching of 21st Century Skills project which explored a framework for understanding the nature of these skills The major element of this new volume is the presentation of research information

from the global assessment of two 21st century skills that are amenable to teaching and learning collaborative problem solving and learning in digital networks The outcomes presented include evidence to support the validity of assessment of 21st century skills and descriptions of consequent pedagogical approaches which can be used both to teach the skills and to use them to enhance key learning goals in secondary education systems The sections of the volume are connected through a focus on the degree to which innovative assessment tasks measure the constructs of interest This focus is informed by conceptual and methodological issues associated with affordances of 21st century computer based assessment How understanding of the nature of the skills as derived from these assessments can guide approaches to the integration of 21st century skills in the classroom is informed by initiatives adopted by participating countries The guiding questions in this volume are Do the assessment tasks measure the constructs and What are the implications for assessment and teaching in the classroom It is the third volume of papers from this project published by Springer Redesigning America's Community Colleges Thomas R. Bailey, Shanna Smith Jaggars, Davis Jenkins, 2015-04-09 Community colleges enroll half of the nation's undergraduates Yet only 40 percent of entrants complete an undergraduate degree in six years Redesigning America's Community Colleges explains how two year colleges can increase their students success rate quickly and at less cost through a program of guided pathways to completion **The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education** National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-07-21 In the United States broad study in an array of different disciplines arts humanities science mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos These silos represent what many see as an artificial separation of academic disciplines This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time The Integration of the Humanities and Arts with Sciences Engineering and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science technology engineering mathematics and medicine STEMM lead to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the

value of integrating more STEM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEM education programs **Abstracts of Papers Presented to the American Mathematical Society**
