A First Course in Scientific Computing Rubin Landau, 2011-10-30 This book offers a new approach to introductory scientific computing. It aims to make students comfortable using computers to do science to provide them with the computational tools and knowledge they need throughout their college careers and into their professional careers and to show how all the pieces can work together. Rubin Landau introduces the requisite mathematics and computer science in the course of realistic problems from energy use to the building of skyscrapers to projectile motion with drag. He is attentive to how each discipline uses its own language to describe the same concepts and how computations are concrete instances of the abstract. Landau covers the basics of computation, numerical analysis, and programming from a computational science perspective. The first part of the printed book uses the problem solving environment Maple as its context with the same material covered on the accompanying CD as both Maple and Mathematica programs. The second part uses the compiled language Java with equivalent materials in Fortran90 on the CD and the final part presents an introduction to LaTeX replete with sample files. Providing the essentials of computing with practical examples, *A First Course in Scientific Computing* adheres to the principle that science and engineering students learn computation best while sitting in front of a computer book in hand in trial and error mode. Not only is it an invaluable learning text and an essential reference for students of mathematics, engineering, physics, and other sciences, but it is also a consummate model for future textbooks in computational science and engineering courses. A broad spectrum of computing tools and examples that can be used throughout an academic career. Practical computing aimed at solving realistic problems. Both symbolic and numerical computations. A multidisciplinary approach: science, math, computer science. Maple and Java in the book itself; Mathematica, Fortran90, Maple, and Java on the accompanying CD in an interactive workbook format.

Medical Image Computing and Computer-Assisted Intervention - MICCAI 2008 Dimitris N. Metaxas, 2008. Annotation: The two volume set LNCS 5241 and LNCS 5242 constitute the refereed proceedings of the 11th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2008 held in New York, NY, USA in September 2008. The program committee carefully selected 258 revised papers from numerous submissions for presentation in two volumes based on rigorous peer reviews. The first volume includes 127 papers related to medical image computing, segmentation, shape and statistics, analysis, modeling, motion tracking, and compensation, as well as registration. The second volume contains 131 contributions related to robotics and interventions, statistical analysis, segmentation, intervention, modeling, and registration.

What Successful Math Teachers Do, Grades 6-12 Alfred S. Posamentier, Terri L. Germain-Williams, Daniel Jaye, 2013-07-11. What works in math and why has never been the issue; the research is all out there. Where teachers struggle is the how. Something the research rarely manages to tackle. That's the big service *What Successful Math Teachers Do* provides. It's a powerful portal to what the best research looks like in practice, strategy by strategy, aligned in this new edition to both the Common Core and the NCTM Standards.

How exactly does What Successful Math Teachers Do work It couldn't be easier to navigate The book's eleven chapters organize clusters of strategies around a single aspect of a typical instructional program For each of the 75 strategies the authors present A brief description of that strategy A summary of supporting research The NCTM and Common Core Standards it meets and how Classroom applications with examples Precautions and possible pitfalls Primary sources for further reading and research
