Algebra The work has been undertaken at the request of many teachers who have introduced the Algebra into their classes and for such readers it is mainly intended but it is hoped that if judiciously used the solutions may also be found serviceable by that large and increasing class of students who read Mathematics without the assistance of a teacher In this edition the entire manuscript was typeset in a bigger size font 10 pt DejaVu Serif honoring readers suggestions using the LaTeX document processing system originally developed by Leslie Lamport based on TeX typesetting system created by Donald Knuth The typesetting software used the XeLaTeX distribution We are grateful for this opportunity to put the materials into a consistent format and to correct errors in the original publication that have come to our attention Most of the hard work of preparing this edition was accomplished by Neeru Singh who expertly keyboarded and edited the text of the original manuscript She helped us put hundreds of pages of typographically difficult material into a consistent digital format The process of compiling this book has given us an incentive to improve the layout to doublecheck almost all of the mathematical rendering to correct all known errors to improve the original illustrations by redrawing them with Till Tantau s marvelous TikZ Thus the book now appears in a form that we hope will remain useful for at least another generation Table of Contents

Elimination Methods in Polynomial Computer Algebra V. Bykov, A. Kytmanov, M. Lazman, Mikael Passare, 2012-12-06

The subject of this book is connected with a new direction in mathematics which has been actively developed over the last few years namely the field of polynomial computer algebra which lies at the intersection point of algebra mathematical analysis and programming There were several incentives to write the book First of all there has lately been a considerable interest in applied nonlinear problems characterized by multiple stationary states Practical needs have then in their turn led to the appearance of new theoretical results in the analysis of systems of nonlinear algebraic equations And finally the introduction of various computer packages for analytic manipulations has made it possible to use complicated elimination theoretical algorithms in practical research The structure of the book is accordingly represented by three main parts Mathematical results driven to constructive algorithms computer algebra realizations of these algorithms and applications Nonlinear systems of algebraic equations arise in diverse fields of science In particular for processes described by systems of differential equations with a polynomial right hand side one is faced with the problem of determining the number and location of the stationary states in certain sets
