Ansoft Maxwell Induction Motor:

Development of Brushless Self-excited and Self-regulated Synchronous Generating System for Wind and Hydro Generators Izzat, Likaa Fahmi Ahmed, 2013-01-01 In this work a developed model of brushless synchronous generator of wound rotor type is designed analyzed by FEM practically applied and investigated A comparison of results with conventional machines is also performed The presented machine can be applied for multi pole wind hydro generators or double poles diesel engine generators It is self excited by residual magnetism and a connected capacitor It is also self regulated by making use of fluctuations at load or limited speed changes The generated voltage may last at extended speed range by arranging a generating system with variable capacitance By eliminating the permanent magnets or advanced manufacturing technology of rotor poles and without using extra rotating external DC exciters an efficient excitation field and an output of flat self compensated compound characteristic are obtained More the feature of damper windings is determined Concerning the fact of environmental diminishing of elements in materials of permanent magnets and D C Battery the presented novel machine is hence a good alternative and more economic from generators exist in the market Beside it is safer and highly recommended for power stability when connected to the grid **Handbook of Electric Motors** Hamid A. Toliyat, Gerald B. Kliman, 2018-10-03 Presenting current issues in electric motor design installation application and performance this second edition serves as the most authoritative and reliable guide to electric motor utilization and assessment in the commercial and industrial sectors Covering topics ranging from motor energy and efficiency to computer aided design and equipment selection this reference assists professionals in all aspects of electric motor maintenance repair and optimization It has been expanded by more than 40 percent to explore the most influential technologies in the field including electronic controls superconducting generators recent analytical tools new computing capabilities and special purpose motors Artificial Intelligence and Applied Mathematics in Engineering Problems D. Jude Hemanth, Utku Kose, 2020-01-03 This book features research presented at the 1st International Conference on Artificial Intelligence and Applied Mathematics in Engineering held on 20-22 April 2019 at Antalya Manavgat Turkey In today's world various engineering areas are essential components of technological innovations and effective real world solutions for a better future In this context the book focuses on problems in engineering and discusses research using artificial intelligence and applied mathematics Intended for scientists experts M Sc and Ph D students postdocs and anyone interested in the subjects covered the book can also be used as a reference resource for courses related to artificial intelligence and applied mathematics *Non-conventional Electrical Machines* Abderrezak Rezzoug, Mohammed El-Hadi Zaim, 2013-02-04 The developments of electrical machines are due to the convergence of material progress improved calculation tools and new feeding sources Among the many recent machines the authors have chosen in this first book to relate the progress in slow speed machines high speed machines and superconducting machines The first part of the book is dedicated to materials and an overview of magnetism mechanic and
