Replication Bernadette Charron-Bost, Fernando Pedone, Andre Schiper, 2010-02-01 Replication is a topic of interest in the distributed computing distributed systems and database communities Although these communities have traditionally looked at replication from different viewpoints and with different goals e g performance versus fault tolerance recent developments have led to a convergence of these different goals The objective of this state of the art survey is not to speculate about the future of replication but rather to understand the present to make an assessment of approximately 30 years of research on replication and to present a comprehensive view of the achievements made during this period of time This book is the outcome of the seminar entitled A 30 Year Perspective on Replication which was held at Monte Verit Ascona Switzerland in November 2007 The book is organized in 13 self contained chapters written by most of the people who have contributed to developing state of the art replication techniques It presents a comprehensive view of existing solutions from a theoretical as well as from a practical point of view It covers replication of processes objects and of databases replication for fault tolerance and replication for performance benign faults and malicious Byzantine faults thus forming a basis for both professionals and students of distributed computing distributed systems and databases **Active Directory Services**
