To protect the finish, keep bollards in original packaging until exact moment of installation.

Once scratched, bollards cannot be repaired to original form without re-finishing the entire surface.

Consider local soil conditions before proceeding with bollard installation.

Before Installation

STEP 1: Always check for hazards such as water pipes, gas lines, and underground wiring before digging.

STEP 2: Study the site plans and mark the precise center point of each bollard.

STEP 3: Please consult your local Building Code Department to determine the recommended depth below the frost line for digging in your area. Choose a minimum of this or 18", whichever is greater. This is the total depth for digging. The diameter of the hole should extend to a minimum of 42". *Note: If you have specific impact requirements, please consult your local civil engineer.*

STEP 4: Center the auger on the installation mark and bore a hole to the required depth and diameter.
