Computer Algebra and Polynomials Jaime Gutierrez, Josef Schicho, Martin Weimann, 2015-01-20 Algebra and number theory have always been counted among the most beautiful mathematical areas with deep proofs and elegant results. However for a long time they were not considered that important in view of the lack of real life applications. This has dramatically changed nowadays we find applications of algebra and number theory frequently in our daily life. This book focuses on the theory and algorithms for polynomials over various coefficient domains such as a finite field or ring. The operations on polynomials in the focus are factorization, composition and decomposition, basis computation for modules etc. Algorithms for such operations on polynomials have always been a central interest in computer algebra as it combines formal the variables and algebraic or numeric the coefficients aspects. The papers presented were selected from the Workshop on Computer Algebra and Polynomials which was held in Linz at the Johann Radon Institute for Computational and Applied Mathematics RICAM during November 25-29 2013 at the occasion of the Special Semester on Applications of Algebra and Number Theory

Numerical Algebra, Matrix Theory, Differential-Algebraic Equations and Control Theory Peter Benner, Matthias Bollhöfer, Daniel Kressner, Christian Mehl, Tatjana Stykel, 2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra, matrix theory, differential algebraic equations and control theory. These mathematical research areas are strongly related and often occur in the same real world applications. The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics. This book also reflects some of Volker Mehrmann's major career stages. Starting out working in the areas of numerical linear algebra, his first full professorship at TU Chemnitz was in Numerical Algebra, hence the title of the book and matrix theory. Volker Mehrmann has made significant contributions to these areas ever since. The highlights of these are discussed in Parts I and II of the present book. Often the development of new algorithms in numerical linear algebra is motivated by problems in system and control theory. These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III. Besides providing a scientific discussion of Volker Mehrmann's work and its impact on the development of several areas of applied mathematics, the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra, matrix theory, differential algebraic equations and control theory

leaders who are focused on transforming instruction and who may be working under significant time constraints to reverse declining student achievement or public perceptions of school failure Based on the evidence that simply implementing continuous improvement is not enough to close the achievement gap The Turnaround Toolkit provides a nine step formative evaluation program designed to achieve an immediate and consistent focus on improving instruction in order to bolster student achievement In a straightforward and accessible fashion Herman and Winters explain three overarching Turnaround Tasks that frame these steps and the necessary and sometimes drastic actions that must be taken by school leaders as they use data to strategically choose implement monitor and revise school interventions A dedicated online toolkit offers numerous worksheets and templates that support each stage of the process and help school leaders scaffold the work of educators to put an aggressive turnaround plan into action while a leadership guide at the end of the book provides guidance to turnaround teams and facilitators
