High School Teacher Edition

Unit 1: Linear Equations and Functions

Students often have difficulty understanding how to graph a linear equation. The key is to understand that a linear equation represents a straight line. To graph a linear equation, you need to find two points that satisfy the equation. One way to do this is to find the x-intercept and the y-intercept. The x-intercept is the point where the line crosses the x-axis, and the y-intercept is the point where the line crosses the y-axis. Once you have these two points, you can draw the line through them.

$$y = 2x + 3$$

$$x = -1, y = 1$$

$$x = 0, y = 3$$

Activity 1: Graphing Linear Equations

- Why do you think the lines in the previous activity are parallel? Explain your answer.

The lines in the previous activity are parallel because they have the same slope. The slope of a line is a measure of how steep the line is. If two lines have the same slope, they are parallel.

- How do you think the lines in the previous activity are not parallel? Explain your answer.

Unit 1: Linear Equations and Functions

- How do you think the lines in the previous activity are parallel? Explain your answer.
- How do you think the lines in the previous activity are not parallel? Explain your answer.
