Developing Mathematical Proficiency for Elementary Instruction Yeping Li,Roger E. Howe,W. James Lewis,James J. Madden,2021-04-23 The need to improve the mathematical proficiency of elementary teachers is well recognized and it has long been of interest to educators and researchers in the U S and many other countries But the specific proficiencies that elementary teachers need and the process of developing and improving them remain only partially conceptualized and not well validated empirically To improve this situation national workshops were organized at Texas A M University to generate focused discussions about this important topic with participation of mathematicians mathematics educators and teachers Developing Mathematical Proficiency for Elementary Instruction is a collection of articles that grew out of those exciting cross disciplinary exchanges Developing Mathematical Proficiency for Elementary Instruction is organized to probe the specifics of mathematical proficiency that are important to elementary teachers during two separate but inter connected professional stages as pre service teachers in a preparation program and as in service teachers teaching mathematics in elementary classrooms From this rich and inspiring collection readers may better understand and possibly rethink their own practices and research in empowering elementary teachers mathematically and pedagogically as educators or researchers

Iterative Methods for the Solution of Equations Joseph Frederick Traub, 1982 From the Preface 1964 This book presents a general theory of iteration algorithms for the numerical solution of equations and systems of equations The relationship between the quantity and the quality of information used by an algorithm and the efficiency of the algorithm is investigated Iteration functions are divided into four classes depending on whether they use new information at one or at several points and whether or not they reuse old information Known iteration functions are systematized and new classes of computationally effective iteration functions are introduced Our interest in the efficient use of information is influenced by the widespread use of computing machines The mathematical foundations of our subject are treated with rigor but rigor in itself is not the main object Some of the material is of wider application Most of the material is new and unpublished Every attempt has been made to keep the subject in proper historical perspective
