carrying capacity-a species' average population size in a particular habitat

density-dependent limiting factor-any force that affects the size of a population of living things in response to the density of the population

density-independent limiting factor-any force that affects the size of a population of living things regardless of the density of the population

limiting factor- anything that constrains a population's size and slows or stops it from growing

population-a group of individuals of the same species living and interbreeding within a given area

population density- the number of individuals per unit geographic area

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Suppose you had a pet rabbit. What would the rabbit need to stay alive and healthy?

Food, water, and shelter

2. A female rabbit can give birth to over 40 baby rabbits a year. Suppose all of her offspring survived and reproduced, all of their offspring survived and reproduced, and so on. If that happened, in only eight years the mass of rabbits would exceed the mass of Earth!

So, why aren't we overrun with rabbits? What keeps the rabbit population in check?

We aren't overrun because rabbits are at the bottom of the food chain, therefore they are prey for larger predators like eagles, hawks, and owls.

Gizmo Warm-up

A **population** is a group of individuals of the same species that live in the same area. The size of a population is determined by many factors. In the *Rabbit Population by Season* Gizmo, you will see how different factors influence how a rabbit population grows and changes.

1. Select the BAR CHART tab. What is the size of the initial rabbit population?

40

2. Select the TABLE tab. Click **Play** (), and allow the simulation to run for one year.

A. In which season did the rabbit population increase the most?

Spring

B. In which season did the rabbit population increase the least?
