Recoding: Expansion of Decoding Rules Enriches Gene Expression John F. Atkins, Raymond F. Gesteland, 2010-03-10 The literature on recoding is scattered so this superb book fills a need by providing up to date comprehensive authoritative reviews of the many kinds of recoding phenomena Between 1961 and 1966 my colleagues and I deciphered the genetic code in *Escherichia coli* and showed that the genetic code is the same in *E. coli*, *Xenopus laevis* and guinea pig tissues These results showed that the code has been conserved during evolution and strongly suggested that the code appeared very early during biological evolution that all forms of life on earth descended from a common ancestor and thus that all forms of life on this planet are related to one another The problem of biological time was solved by encoding information in DNA and retrieving the information for each new generation for it is easier to make a new organism than it is to repair an aging malfunctioning one Subsequently small modifications of the standard genetic code were found in certain organisms and in mitochondria Mitochondrial DNA only encodes about 10-13 proteins so some modifications of the genetic code are tolerated that probably would be lethal if applied to the thousands of kinds of proteins encoded by genomic DNA
