Automotive Embedded Systems Handbook Nicolas Navet, Françoise Simonot-Lion, 2017-12-19. A Clear Outline of Current Methods for Designing and Implementing Automotive Systems. It also examines AUTOSAR as the emerging de facto standard and looks at how key technologies such as sensors and wireless networks will facilitate the conception of partially and fully autonomous vehicles. The next section focuses on networks and protocols including CAN, LIN, FlexRay, and TTCAN. The third part explores the design processes of electronic embedded systems along with new design methodologies such as the virtual platform. The final section presents validation and verification techniques relating to safety issues. Providing domain-specific solutions to various technical challenges, this handbook serves as a reliable, complete, and well-documented source of information on automotive embedded systems.

Handbook of Research on Politics in the Computer Age Solo, Ashu M. G., 2019-08-30. Technology, and particularly the Internet, have caused many changes in the realm of politics. Aspects of engineering, computer science, mathematics, or natural science can be applied to politics. Politicians and candidates use their

own websites and social network profiles to get their message out. Revolutions in many countries in the Middle East and North Africa have started in large part due to social networking websites such as Facebook and Twitter. Social networking has also played a role in protests and riots in numerous countries. The mainstream media no longer has a monopoly on political commentary as anybody can set up a blog or post a video online. Now political activists can network together online. The Handbook of Research on Politics in the Computer Age is a pivotal reference source that serves to increase the understanding of methods for politics in the computer age, the effectiveness of these methods and tools for analyzing these methods. The book includes research chapters on different aspects of politics with information technology, engineering, computer science or math from 27 researchers at 20 universities and research organizations in Belgium, Brazil, Cape Verde, Egypt, Finland, France, Hungary, Italy, Mexico, Nigeria, Norway, Portugal, and the United States of America. Highlighting topics such as online campaigning and fake news, the prospective audience includes but is not limited to researchers, political and public policy analysts, political scientists, engineers, computer scientists, political campaign managers and staff, politicians and their staff, political operatives, professors, students, and individuals working in the fields of politics, e-politics, e-government, new media and communication studies, and Internet marketing.
