Researchers from the entire world write to figure out their newest results and to contribute new ideas or ways in the field of system reliability and maintenance. Their articles are grouped into four sections: reliability of electronic devices, power system reliability, and feasibility and maintenance. The book is a valuable tool for professors, students, and professionals with its presentation of issues that may be taken as examples applicable to practical situations. Some examples defining the contents can be highlighted: system reliability analysis based on goal oriented methodology, reliability design of water dispensing systems, reliability evaluation of drivetrains for off highway machines, extending the useful life of asset network, reliability for faster feasibility decision analysis of standard reliability parameters of technical systems, parts cannibalisation for improving system reliability, mathematical study on the multiple temperature operational life testing procedure for electronic industry, reliability prediction of smart maximum power point converter in photovoltaic applications, reliability of die interconnections used in plastic discrete power packages, the effects of mechanical and electrical straining on performances of conventional thick film resistors, software and hardware development in the electric power system, electric interruptions and loss of supply in power systems, feasibility of autonomous hybrid AC DC microgrid system, predictive modelling of emergency services in electric power distribution systems, web based decision support system in the electric power distribution system, preventive maintenance of a repairable equipment operating in severe environment and others.

Advances in Hydroinformatics Philippe Gourbesville, Jean Cunge, Guy Caignaert, 2018-02-26. This book gathers a collection of extended papers based on presentations given during the SimHydro 2017 conference held in Sophia Antipolis Nice France on June 14-16 2017. It focuses on how to choose the right model in applied hydraulics and considers various aspects including the modeling and simulation of fast hydraulic transients, 3D modeling, uncertainties and multiphase flows. The book explores both limitations and performance of current models and presents the latest developments in new numerical schemes, high performance computing, multiphysics and multiscale methods, and better interaction with field or scale model data. It gathers the latest theoretical and innovative developments in the modeling field and presents some of the most advanced applications on various water related topics like uncertainties, flood simulation and complex hydraulic applications. Given its breadth of coverage, it addresses the needs and interests of practitioners, stakeholders, researchers, and engineers alike.

Noise and Vibration Control Ehsan Noroozinejad Farsangi, 2019-10-02. The book presents a collection of articles on novel approaches to problems of current interest in vibration control by academicians, researchers, and practicing engineers from all over the world. The book is divided into eight chapters and encompasses multidisciplinary areas within the scope of noise and vibration engineering such as structural dynamics, structural mechanics, finite element modeling, vibration control, and material
