2012 Chapter 6 Carnegie Test:

Time Series and Panel Data Econometrics M. Hashem Pesaran, 2015 The book describes and illustrates many advances that have taken place in a number of areas in theoretical and applied econometrics over the past four decades

Improving Teacher Evaluation Systems Jason A. Grissom, Peter Youngs, 2016 This is the first book to pull together what we have learned about the impacts and challenges of data intensive teacher evaluation systems a defining characteristic of the current education policy landscape Expert researchers and practitioners speak to what we know and what remains to be known about evaluation measures themselves the implementation of evaluation systems and the use of evaluation data The authors argue that rigorous teacher evaluation systems have the potential to promote school improvement but only if the systems are carefully designed and implemented and the data they generate are interpreted and used appropriately This timely and important volume will be relevant and useful to school and district administrators policymakers researchers and teacher education institutions grappling with issues of teacher accountability and school leadership

"Proof," Policy, and Practice Paul E. Lingenfelter, 2023-07-03 How can we fix our schools Improve graduation rates in college What works These are questions that make the headlines and vex policy makers practitioners and educational researchers While they strive to improve society there are frequently gulfs of mutual incomprehension among them Academics longing for more influence may wrongly fault irrationality ideology or ignorance for the failure of research to inform policy and practice more powerfully Policy makers and practitioners may doubt that academics can deliver ideas that will reliably yield desirable results This book bridges the divide It argues that unrealistic expectations lead to both unproductive research and impossible standards for evidence based policy and practice and it offers promising ways for evidence to contribute to improvement It analyzes the utility and limitations of the different research methods that have been applied to policy and practice as well as the strengths and weaknesses of educational reform strategies It explains why using evidence for accountability often makes things worse rather than better Paul Lingenfelter offers educational researchers and policy makers a framework for considering such questions as What problems are important and accessible What methods will be fruitful Which help policy makers and practitioners make choices and learn how to improve What information is relevant What knowledge is valid and useful How can policy makers and practitioners establish a more productive division of labor based on their respective capabilities and limitations He cautions against the illusion that straight forward scientific approaches and data can be successfully applied to society's most complex problems While explaining why no single policy or intervention can solve complex problems he concludes that determination measurement analysis and adaptation based on evidence in specific situations can lead to significant improvement This positive even handed introduction to the use of research for problem solving concludes by suggesting emerging practices and approaches that can help scholars practitioners and policy leaders become more successful in reaching their fundamental goals

Statistical Methods in Software Engineering Nozer D. Singpurwalla,Simon P. Wilson,2012-12-06 This preface pertains to three issues that we would like to bring to the attention of the readers our objectives our intended audience and the nature of the material We have in mind several objectives The first is to establish a framework for dealing with uncertainties in software engineering and for using quantitative measures for decision making in this context The second is to bring into perspective the large body of work having statistical content that is relevant to software engineering which may not have appeared in the traditional outlets devoted to it Connected with this second objective is a desire to streamline and organize our own thinking and work in this area Our third objective is to provide a platform that facilitates an interface between computer scientists and statisticians to address a class of problems in computer science It appears that such an interface is necessary to provide the needed synergism for solving some difficult problems that the subject poses Our final objective is to serve as an agent for stimulating more cross disciplinary research in computer science and statistics To what extent the material here will meet our objectives can only be assessed with the passage of time Our intended audience is computer scientists software engineers and reliability analysts who have some exposure to probability and statistics Applied statisticians interested in reliability problems are also a segment of our intended audience

Shaping the Bar Joan Howarth,2022-12-13 The comprehensive source on attorney licensing and how to reform it In Shaping the Bar Joan Howarth describes how the twin gatekeepers of the legal profession law schools and licensers are failing the public Attorney licensing should be laser focused on readiness to practice law with the minimum competence of a new attorney According to Howarth requirements today are both too difficult and too easy Amid the crisis in unmet legal services record numbers of law school graduates disproportionately people of color are failing bar exams that are not meaningful tests of competence to practice At the same time after seven years of higher education hundreds of thousands of dollars of law school debt two months of cramming legal rules and success on a bar exam a candidate can be licensed to practice law without ever having been in a law office or even

seen a lawyer with a client Howarth makes the case that the licensing rituals familiar to generations of lawyers unfocused law degrees and obsolete bar exams are protecting members of the profession more than the public Beyond explaining the failures of the current system this book presents the latest research on competent lawyering and examples of better approaches This book presents the path forward by means of licensing changes to protect the public while building an inclusive diverse competent ethical profession Thoughtful and engaging Shaping the Bar is both an authoritative account of attorney licensing and a pragmatic handbook for overdue equitable reform of a powerful profession
