Georg Rilinger, 2024-08-19 A new framework for studying markets as the product of organizational planning and understanding the practical limits of market design The Western energy crisis was one of the great financial disasters of the past century The crisis began in April 2000 when price spikes started to rattle California's electricity markets Decades later some blame economic fundamentals and ignorant politicians while others accuse the energy sellers who raided the markets In Failure by Design sociologist Georg Rilinger offers a different explanation one that focuses on the practical challenges of market design The unique physical attributes of electricity made it exceedingly difficult to introduce markets into the coordination of the electricity system so market designers were brought in to construct the infrastructures that coordinate how market participants interact An exercise in social engineering these infrastructures were intended to guide market actors toward behavior that would produce optimal market results and facilitate grid management Yet though these experts spent their days worrying about incentive misalignment and market manipulation they unintentionally created a system riddled with opportunities for destructive behavior Rilinger's analysis not only illuminates the California energy crisis but also develops a broader theoretical framework for thinking about markets as the products of organizational planning and the limits of social engineering contributing broadly to sociological and economic thinking about the nature of markets

Deeply Responsible Business Geoffrey Jones, 2023-03-21 Corporate social responsibility has entered the mainstream but what does it take to run a successful purpose driven business A Harvard Business School professor examines leaders who put values alongside profits to showcase the challenges and upside of deeply responsible business For decades CEOs have been told that their only responsibility is to the bottom line But consensus is that companies and their leaders must engage with their social and environmental contexts The man behind one of Harvard Business School's most popular courses Geoffrey Jones distinguishes deep responsibility which can deliver radical social and ecological responses from corporate social responsibility which is often little more than window dressing Deeply Responsible Business offers an invaluable historical perspective going back to the Quaker capitalism of George Cadbury and the worker solidarity of Edward Filene Through a series of in depth profiles of business leaders and their companies it carries us from India to Japan and from the turmoil of the nineteenth century to the latest developments in impact investing and the B corps Jones profiles business leaders from around the world who combined profits with social purpose to confront inequality inner city blight and ecological degradation while navigating restrictive laws and authoritarian regimes He found that these leaders were motivated by bedrock values and sometimes but not always driven by faith They chose to operate in socially productive fields interacted with humility with stakeholders and felt a duty to support their communities While far from perfect some combined visionary practices with vital flaws each one showed that profit and purpose could be reconciled Many of their businesses were highly successful though financial success was not their only metric of achievement As companies seek to coopt ethically sensitized consumers Jones

gives us a new perspective to tackle tough questions Inspired by these passionate and pragmatic business leaders he envisions a future in which companies and entrepreneurs can play a key role in healing our communities and protecting the natural world

Liquid Natural Gas in the United States John Hrastar,2014-07-10 When natural gas was first discovered in Appalachia in the 19th century its development as a fuel was rapid Unlike oil and coal gas could be moved only by pipeline and required large containers for storage It was not possible to cope with peak loads without adding excessive pipeline capacity until just before World War II when two sister gas companies developed a plant to liquefy and store natural gas as a liquid the liquid was then regasified to deal with peak loads The liquid is 1 600 the volume of the gas but it requires storage at an extremely low temperature 1 260 F This worked well until 1944 when a liquid natural gas LNG tank in Cleveland ruptured and caused a fire with 130 fatalities The fire did not end the industry but caused it to pause Over the next few years the problems in materials design standards and siting were solved The recognition that liquefaction made LNG transportable without a pipeline was the breakthrough In 1959 a shipload of LNG went from Louisiana to Britain and restarted the LNG industry It is now a major worldwide energy industry and the topic of this work
