

VEGIUM LAB Average Atomic Mass

Objectives

- Determine the weight of each isotopes of the fictitious element "VEGIUM".
- Determine the relative abundances of the isotopes of "VEGIUM".
- Calculate from experimentally data atomic mass of "VEGIUM".

Introduction

Isotopes are atoms of the same atomic number having different masses due to different numbers of neutrons. The atomic mass of an element is a weighted average, taking into account both the mass and relative abundances of each isotope of that element as it occurs in nature. The relative abundances and masses of each atomic particles are measured in the laboratory by an independent method or statistical methods. The mass spectrometer separates particles by mass and measures the mass and relative abundance of each type of particle in nature. From these data a weighted average is calculated to determine the atomic mass of the element.

Purpose

In this lab you will carry out experimentally and perform the necessary calculations to determine the mass, mass of isotopes, three isotopes of "VEGIUM" (three elements in nature: boron, gallium, and black-eyed peas). These isotopes are different particles of "VEGIUM" having different masses. Unlike real isotopes, the hypothetical real type particles (boron, gallium, and black-eyed peas) differ slightly in mass, so you will determine the average mass of each type of isotopic particle. Then you will determine the relative abundance of each isotope, and use the data along with the isotopic masses to calculate the weighted average mass, or atomic mass, of "VEGIUM".

Materials & Equipment

- 100g of "VEGIUM"
- 100g of "VEGIUM"
- weighing boat that will fit in weighing dish

Experimental Procedure

Carry out the following steps and record your results in your data table. Round all calculations neatly to a number of digits as given. Report all numbers to the right significant figures.

1. Weigh all three samples. Mass all three peas. Mass all three black-eyed peas. Record your data.
 2. Count all the peas. Mass all the peas. Mass all the black-eyed peas. Record your data.
 3. Divide the total mass of each isotope by the number of each isotope to get the average mass of each isotope.
- NOTE: In all cases except the average mass in the table, the numbers in the "total" columns are the sum of all the data. The numbers in the "total" columns are the sum of all the data. The numbers in the "total" columns are the sum of all the data. The numbers in the "total" columns are the sum of all the data.

Answers For Vegium Lab
