University Periodical Index ,1958 **Thermodynamics and Heat Powered Cycles** Chih Wu,2007 Due to the rapid advances in computer technology intelligent computer software and multimedia have become essential parts of engineering education Software integration with various media such as graphics sound video and animation is providing efficient tools for teaching and learning A modern textbook should contain both the basic theory and principles along with an updated pedagogy Often traditional engineering thermodynamics courses are devoted only to analysis with the expectation that students will be introduced later to relevant design considerations and concepts Cycle analysis is logically and traditionally the focus of applied thermodynamics Type and quantity are constrained however by the computational efforts required The ability for students to approach realistic complexity is limited Even analyses based upon grossly simplified cycle models can be computationally taxing with limited educational benefits Computerised look up tables reduce computational labour somewhat but modelling cycles with many interactive loops can lie well outside the limits of student and faculty time budgets The need for more design content in thermodynamics books is well documented by industry and educational oversight bodies such as ABET Accreditation Board for Engineering and Technology Today thermodynamic systems and cycles are fertile ground for engineering design For example niches exist for innovative power generation systems due to deregulation co generation unstable fuel costs and concern for global warming Professor Kenneth Forbus of the computer science and education department at Northwestern University has developed ideal intelligent computer software for thermodynamic students called CyclePad CyclePad is a cognitive engineering software It creates a virtual laboratory where students can efficiently learn the concepts of thermodynamics and allows systems to be analyzed and designed in a simulated interactive computer aided design environment The software guides students through a design process and is able to provide explanations for results and to coach students in improving designs Like a professor or senior engineer CyclePad knows the laws of thermodynamics and how to apply them If the user makes an error in design the program is able to remind the user of essential principles or design steps that may have been overlooked If more help is needed the program can provide a documented case study that recounts how engineers have resolved similar problems in real life situations CyclePad eliminates the tedium of learning to apply thermodynamics and relates what the user sees on the computer screen to the design of actual systems This integrated engineering textbook is the result of fourteen semesters of CyclePad usage and evaluation of a course designed to exploit the power of the software and to chart a path that truly integrates the computer with education The primary aim is to give students a thorough grounding in both the theory and practice of thermodynamics The coverage is compact without sacrificing necessary theoretical rigor Emphasis throughout is on the applications of the theory to actual processes and power cycles This book will help educators in their effort to enhance education through the effective use of intelligent computer software and computer assisted course work Problems of Air Pollution in the District of Columbia United States.
