Answer Of Biology Objective May June 2014:

Recoded City Thomas Ermacora, Lucy Bullivant, 2016-07-01 Recoded City examines alternative urban design planning and architecture for the other 90% namely the practice of participatory placemaking a burgeoning practice that co author Thomas Ermacora terms recoding In combining bottom up and top down means of regenerating and rebalancing neighbourhoods affected by declining welfare or struck by disaster this growing movement brings greater resilience Recoded City sheds light on a new epoch in the relationship between cities and civil society by presenting an emerging range of collaborative solutions and distributed governance models The authors draw on their own fresh research of global pioneers forging localist design strategies public realm interventions and new stakeholder dynamics As the world becomes increasingly digital and virtual a myriad of online tools and technological options is becoming available These give unprecedented co creation opportunities to communities and professionals alike yielding the benefits of a more open DIY society Because of its close engagement with people place and local identity the field of participatory placemaking has huge untapped potential Responding to the challenges of the Anthropocene era Recoded City is for decision makers developers and practitioners working globally to make better and more liveable cities

Is There Purpose in Biology? Denis Alexander, 2018-06-22 Atheists assert that the natural world has no meaning or purpose Dr Denis Alexander Emeritus Director of The Faraday Institute for Science and Religion at St Edmunds College Cambridge draws a different conclusion Not only do recent evolutionary biological data appear inconsistent with the claim that the world is purposeless but the Christian doctrine of creation has provided and continues to provide both context and stimulus for the study of the natural world Christians started biology However is a belief in an omnipotent benign Creator consistent with a world of pain and suffering From a lifetime s study in the biological sciences Denis Alexander believes that whilst the cost of existence is extremely high it can nonetheless be squared with the idea of a God of love whose ultimate purposes for humankind render that cost more comprehensible

2014 Global Hunger Index Saltzman, Amy, Birol, Ekin, Wiesman, Doris, Prasai, Nilam, Yohannes, Yisehac, Menon, Purnima, Thompson, Jennifer, 2014-10-13 With one more year before the 2015 deadline for achieving the Millennium Development Goals the 2014 Global Hunger Index report offers a multifaceted overview of global hunger that brings new insights to the global debate on where to focus efforts in the fight against hunger and malnutrition The state of hunger in developing countries as a group has improved since 1990 falling by 39 percent

according to the 2014 GHI Despite progress made the level of hunger in the world is still serious with 805 million people continuing to go hungry according to estimates by the Food and Agriculture Organization of the United Nations The global average obscures dramatic differences across regions and countries Regionally the highest GHI scores and therefore the highest hunger levels are in Africa south of the Sahara and South Asia which have also experienced the greatest absolute improvements since 2005 South Asia saw the steepest absolute decline in GHI scores since 1990 Progress in addressing child underweight was the main factor behind the improved GHI score for the region since 1990 **Commerce, Justice,**

[Innovative Concepts, Methods and Tools for Scientific Discovery in the Plant Sciences](#) Erich Kombrink, Markus

Kaiser, 2016-08-12 Biologically active small molecules have increasingly been applied in plant biology to dissect and understand biological systems This is evident from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription translation or protein degradation In contrast to animal systems which are nurtured from drug research the systematic development of novel bioactive small molecules as research tools for plant systems is a largely underexplored research area This is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting diverse biological processes In particular when small molecules are integrated into genetic strategies thereby defining chemical genetics they may help to circumvent inherent problems of classical forward genetics There are now clear examples of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully exploited potential of this experimental approach These include the unraveling of molecular mechanisms and critical steps in hormone signaling activation of defense reactions and dynamic intracellular processes The intention of this Research Topic of Frontiers in Plant Physiology is to summarize the current status of research at the interface between chemistry and biology and to identify future research challenges The research topic covers diverse aspects of plant chemical biology including the identification of bioactive small molecules through screening processes from chemical libraries and natural sources which rely on robust and quantitative high throughput bioassays the critical evaluation and characterization of the compound's activity selectivity and ultimately the identification of its protein target's and mode of action which is yet the biggest challenge of all Such well characterized selective chemicals are attractive tools for basic research allowing the functional dissection of plant signaling processes or for applied purposes if designed for protection of crop plants from disease New methods and data mining tools for assessing the bioactivity profile of compounds exploring the chemical space for structure function relationships and comprehensive chemical fingerprinting metabolomics are also important strategies in plant chemical biology In addition there is a continuing need for diverse target specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments To

achieve these goals and to add suitable probes and methods to the experimental toolbox plant biologists need to closely cooperate with synthetic chemists The development of such tailored chemicals that beyond application in basic research can modify traits of crop plants or target specific classes of weeds or pests by collaboration of applied and academic research groups may provide a bright future for plant chemical biology The current Research Topic covers the breadth of the field by presenting original research articles methods papers reviews perspectives and opinions **Replace, Repair, Restore,**

Control of Visceral Leishmaniasis by Immunotherapeutic and Prophylactic Strategies
Nahid Ali,Hira L. Nakhasi,Jesus G Valenzuela,Alexandre Barbosa Reis,2015-06-28 Visceral leishmaniasis VL or kala azar is the most dreadful of all forms of leishmaniasis caused by *Leishmania donovani* in Old World and *Leishmania chagasi* and or *Leishmania infantum* in New World affecting millions of people worldwide In active VL macrophages host the replicating amastigotes in phagolysosomal compartments leading to splenomegaly hepatomegaly hyperglobulinemia anemia weight loss incessant fever and ultimately death if not treated Treatments available against the disease are limited by increased incidence of resistance serious side effects high cost and long course of treatment Immuno chemotherapy is an alternative to overcome the limitations of the drugs against VL Combination of one or more of immunotherapeutic agents like BCG Alum IFN antigen pulsed dendritic cells DC etc with chemotherapeutic drugs have been tested raising hopes for a suitable immuno chemotherapy against VL and Post Kala azar Dermal Leishmaniasis PKDL Antagonists of IL 10 TGF IL 13 have been effectively used with pentavalent antimonials in treatment of experimental VL Some parasitic antigens and liposomal formulations have also been shown to impart superior therapeutic effectiveness to antileishmanial drugs For socio economic reasons prophylaxis is always more desirable than therapy Although no vaccine against any form of leishmaniasis in humans is available patients successfully treated show considerable protection from reinfection highlighting the possibility of developing prophylactic measures against the disease Subsequently a lot of interest has been focused recently towards developing vaccines against VL and many potential vaccine candidates like whole cell attenuated or heat killed crude fractions purified subunits DNAs recombinant proteins fusion proteins and genetically modified live attenuated parasites etc have been reported These vaccine candidates are either activators of CD4 Th1 cells and or CD8 T cells or neutralizers of immuno suppression Cationic liposomal formulations nanoparticle and virosome delivery systems etc have been used to increase potency and durability of various vaccine candidates Immuno modulators like TLR agonists have been shown to be promising adjuvants in enhancing efficacy and overcoming the challenge of human administrable vaccine formulations

Recently role of sand fly salivary gland proteins as immune modulators also has been explored Various strategies such as heterologous prime boosting targeted antigen delivery adjuvant mediated protection have been undertaken Likewise precise role of regulatory T cells Tregs in VL disease progression needs to be investigated and exploited to develop both immuno therapeutic and prophylactic methods A breakthrough in immunotherapy and prophylactic strategy would help in eradication of the parasites from the pool of natural reservoirs namely VL and PKDL patients asymptomatic carrier individuals and infected dogs ensuring success of global VL control programs

Sulfur Metabolism in Plant Growth, Development, and Stress Response Stanislav Kopriva,Dibyendu Talukdar,Hideki

Takahashi,Rüdiger Hell,Agnieszka Sirko,Stanislaus F. D' Souza,Tulika Talukdar,2016-09-07 Growing plants have a constitutive demand for sulfur to synthesize proteins sulfolipids and other essential sulfur containing molecules for growth and development The uptake and subsequent distribution of sulfate is regulated in response to demand and environmental cues The importance of sulfate for plant growth and vigor and hence crop yield and nutritional quality for human and animal diets has been clearly recognized The acquisition of sulfur by plants however has become an increasingly important concern for the agriculture due to the decreasing S emissions from industrial sources and the consequent limitation of inputs from atmospheric deposition Molecular characterization involving transcriptomics proteomics and metabolomics in Arabidopsis thaliana as well as in major crops revealed that sulfate uptake distribution and assimilation are finely regulated depending on sulfur status and demand and that these regulatory networks are integrated with cell cycle photosynthesis carbohydrate metabolism hormonal signaling uptake and assimilation of other nutrients etc to enable plant growth development and reproduction even under different biotic and abiotic stresses This knowledge can be used to underpin approaches to enhance plant growth and nutritional quality of major food crops around the world Although considerable progress has been made regarding the central role of sulfur metabolism in plant growth development and stress response several frontiers need to be explored to reveal the mechanisms of the cross talk between sulfur metabolism and these processes In this research topic the knowledge on plant sulfur metabolism is reviewed and updated Focus is put not only on molecular mechanisms of control of sulfur metabolism but also on its integration with other vital metabolic events The topic covers 4 major areas of sulfur research sulfate uptake assimilation and metabolism regulation and role in stress response We hope that the topic will promote interaction between researchers with different expertise and thus contribute to a more integrative approach to study sulfur metabolism in plants
