of Plant Hormones T.C. Moore, 2012-12-06 Biochemistry and Physiology of Plant Hormones is intended primarily as a
 textbook or major reference for a one term intermediate level or advanced course dealing with hormonal regulation of
 growth and development of seed plants for students majoring in biology botany and applied botany fields such as agronomy
 forestry and horticulture Additionally it should be useful to others who wish to become familiar with the topic in relation to
 their principal student or professional interests in related fields It is assumed that readers will have a background in
 fundamental biology plant physiology and biochemistry The dominant objective of Biochemistry and Physiology of Plant Hor
 mones is to summarize in a reasonably balanced and comprehensive way the current state of our fundamental knowledge
 regarding the major kinds of hormones and the phytochrome pigment system Written primarily for students rather than
 researchers the book is purposely brief Biochemical aspects have been given priority intentionally somewhat at the expense
 of physiological considerations There are extensive citations of the literature both old and recent but it is hoped not so much
 documentation as to make the book difficult to read The specific choices of publications to cite and illustrations to present
 were made for different reasons often to illustrate historical development sometimes to illustrate ideas that later proved
 invalid occasionally to exemplify conflicting hypotheses and most often to illustrate the current state of our knowledge about
