

Circulatory/Cardiovascular System Study Guide

1. Explain the difference between the circulatory system and cardiovascular system? Is there a difference? No
2. Both of these systems are made up of? Heart, Blood, and blood vessels
3. Explain blood flow direction in the circulatory system? Circulation is one-way
4. Define:
 - a. Artery: carry oxygenated blood away from the heart/lungs to all parts of the body
 - b. Vein: carry waste products (carbon dioxide) back to heart/lungs
 - c. Capillary: Very, very small arteries with very, very thin walls.
5. What's the purpose of heart valves? The valves keep blood moving through the heart in the right direction.
6. What are chordae tendineae? Known as the heart strings, are tendon-resembling fibrous cords of connective tissue that connect the papillary muscles to the tricuspid valve and the mitral valve in the heart.
7. Name the 4 chambers of the human heart? Right atrium, right ventricle, left atrium, left ventricle
8. What is the advantage to having 4 chambers of the heart? Very efficient, allows us to send our "dirty blood" to the cleaners (lungs) and our "clean blood" to the rest of the body without having to mix the two.
9. What do the heart nodes do? Controls electrical pulses in the heart
10. Name 3 nodes in the heart? SA node, AV node,
11. What's the biggest blood vessel in the body? aorta
12. Which artery carries oxygenated blood from the heart to the rest of the body? aorta
13. What vein carries de-oxygenated blood to the heart? Vena cava
14. Top 2 chambers of the heart are called? atrium
15. Bottom 2 chambers of the heart are called? ventricle
16. Explain blood flow through the heart. On the right side of the heart, blood enters the heart through two large veins, inferior and superior vena cava. That pulls deoxygenated blood into the right atrium of the heart. When the atrium contracts blood flows from your right atrium into your right ventricle through the open tricuspid valve. When the ventricle is full, the tricuspid valve shuts. This prevents blood from flowing backward into the atria while the ventricle contracts. As the ventricle contracts blood leaves the heart and goes to the lungs where it is oxygenated. On the left side of the heart, the pulmonary vein empties oxygen-rich blood from

Pearson Education Circulatory System Study Guide

Ian Peate, Peter Dryden

Pearson Education Circulatory System Study Guide:

Pm Science P5/6 Guided Wb Systems Matthew Cole,2009 **Bates' Guide to Physical Examination and History-Taking** Lynn Bickley,Peter G. Szilagyi,2012-11-01 With the 11th edition focus turns back to the student in nurse practitioner physician s assistant and medical programs The text continues be a trusted reference for nursing and medical students as well as practitioners The art program has been revised to bring greater consistency and currency to the illustrations Many photographs particularly those depicting skin conditions are being replaced with newer photos of higher quality The well respected and highly useful layout and organization of the book are retained Each chapter has been reviewed and revised to keep the text up to date The following features long admired among dedicated Bates users are also retained Detailed beautifully depicted Tables of Abnormalities Extensive Pediatric chapter Illustrated Anatomy and Physiology review begins each chapter Important information on Interviewing Techniques and Patient Communication Outstanding line art program Two column format as guide for physical assessment Useful Clinical tips throughout The ancillary assets are also being updated to redirect the focus toward higher level nursing students and medical students

The ESC Textbook of Cardiovascular Nursing Catriona Jennings,Felicity Astin,Donna Fitzsimons,Ekaterini Lambrinou,Lis Neubeck,David R.
