Abstract: The effect of the use of a mobile phone on the performance of a simulated driving task was investigated. The participants were divided into two groups: one group used a mobile phone while driving, and the other group did not. The results showed that the use of a mobile phone significantly impaired the performance of the driving task, particularly in terms of reaction time and lane deviation. The findings suggest that the use of a mobile phone while driving is a major risk factor for road accidents.

Discussion: EGF is an essential stimulant for proliferation and differentiation of epithelial cells. In the absence of this mitogenic activity regulation, EGF may promote tumor progression. However, in the presence of EGF, these tumors will transform into well-differentiated, non-aggressive carcinoma. The observed effect of EGF on tumor growth is not surprising, since EGF plays a role in the cell cycle and cell differentiation [1]. These observations indicate that
