Figure 1-16 is a drawing of a longitudinal section of the humerus. Within the humerus, there is a central, hollow, cylindrical structure called the medullary canal. The medullary canal is surrounded by a thick, dense layer of bone called the compact bone. The compact bone is made up of many small, repeating units called osteons. The osteons are arranged in a regular, repeating pattern in the compact bone. The medullary canal is located in the center of the humerus. The medullary canal is surrounded by a layer of bone called the endosteum. The endosteum is a single layer of cells that lines the medullary canal. The endosteum is responsible for the growth and repair of the bone.
