MRCP Questions-Answer Mr. Rohit Manglik, 2024-07-30 A curated set of high yield questions with answers and explanations tailored for MRCP aspirants to enhance clinical reasoning and exam readiness **Eye Health: Challenges and Solutions** Kai Cao, Mayinuer Yusufu, Jie Hao, 2024-09-30 Eye health is an important part of public health It is estimated that more than 40 million people are blind and more than 550 million people suffer from mild to severe visual impairment by 2020 In addition at least one billion people worldwide suffer from visual impairment most of which could have been prevented The majority of people with vision impairment and blindness are over the age of 50 years however vision loss can affect people of all ages The World Health Organization reports that the top causes of blindness and vision loss include cataract uncorrected ametropia glaucoma age related macular disease diabetes retinopathy etc As people s lifestyles change the disease spectrum is evolving across the globe and responses and strategies need to change in time Efforts to reduce the prevalence incidence progression of eye diseases could have a profound impact on public health The aim of the current Research Topic is to focus on recent and novel research trends in ocular diseases glaucoma diabetic retinopathy myopia etc and visual impairment especially preventive strategies to avoid younger age of ocular diseases onset and vision loss Additionally new studies are important to identify strategies that would help better screen ocular diseases or prevent vision loss We aim for a state of the art collection of articles that will provide professionals and managers with knowledge of the risk factors prediction screening management and prevention of ocular diseases as well as the risk factors prediction management and prevention of vision loss **FRCophth Part 2 MCQs** Julian Tagal, Hee Ninh Ling, 2014-04-15 Multiple Choice Question MCQ book comprising 5 MCQ practice papers with a total of 450 questions for the FRCophth Part 2 examination The style and proportion of questions allocated by Subspeciality Investigations Therapeutics Guidelines and Miscellaneous topics closely reflects that of current 2013 Part 2 MCQ papers Each practice paper comprises 90 questions and is followed by a comprehensive Answers and Discussion paper complete with source references *Curing Medicare* Andy Lazris, 2016-06-14 Andy Lazris MD is a practicing primary care physician who experiences the effects of Medicare policy on a daily basis As a result he believes that the way we care for our elderly has taken a wrong turn and that Medicare is complicit in creating the very problems it seeks to solve Aging is not a disease to be cured it is a life stage to be lived Lazris argues that aggressive treatments cannot change that fact but only get in the way and decrease quality of life Unfortunately Medicare s payment structure and rules deprive the elderly of the chance to pursue less aggressive care which often yields the most humane and effective results Medicare encourages and will pay more readily for hospitalization than for palliative and home care It encourages and pays for high tech assaults on disease rather than for the primary care that can make a real difference in the lives of the elderly Lazris offers straightforward solutions to ensure Medicare s solvency through sensible cost effective plans that do not restrict patient choice or negate the doctor patient relationship Using both

data and personal stories he shows how Medicare needs to change in structure and purpose as the population ages the physician pool becomes more specialized and new medical technology becomes available Curing Medicare demonstrates which medical interventions medicines tests procedures work and which can be harmful in many common conditions in the elderly the harms and benefits of hospitalization the current culture of long term care and how Medicare often promotes care that is ineffective expensive and contrary to what many elderly patients and their families really want **Braunwald's**

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05. Converging evidence demonstrates a strong link between reading and mathematics: multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information, attention, working memory and cognitive control. Additionally, multiple brain networks are involved in both math and reading and last, common genetic factors might influence both reading and math. Hence, it comes as no surprise that there are meaningful associations between aspects of math and reading abilities. Moreover, comorbidity rates between math learning disabilities (MD) and reading disabilities (RD) are high, up to 66%, and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities. Accordingly, the goal of the research topic is to explore the underlying mechanisms of this overlap between reading and math. The research topic aims to include the following topics: Genetics. It has been found that

both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
