Congress. Senate. Committee on Energy and Natural Resources, 2011 The Cybersecurity Workforce of Tomorrow Michael Nizich, 2023-07-31 The Cybersecurity Workforce of Tomorrow discusses the current requirements of the cybersecurity worker and analyses the ways in which these roles may change in the future as attacks from hackers criminals and enemy states become increasingly sophisticated *Evidence-Based Cybersecurity* Pierre-Luc Pomerleau, David Maimon, 2022-06-23 The prevalence of cyber dependent crimes and illegal activities that can only be performed using a computer computer networks or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide As a result cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals and organizations risk of experiencing cyber dependent crimes However although cybersecurity research and tools production efforts have increased substantially very little attention has been devoted to identifying potential comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist Moreover it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing Consequently governmental organizations public and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face

Unfortunately this practice may complicate organizational workflows and increase costs for government entities businesses and consumers The success of the evidence based approach in improving performance in a wide range of professions for example medicine policing and education leads us to believe that an evidence based cybersecurity approach is critical for improving cybersecurity efforts This book seeks to explain the foundation of the evidence based cybersecurity approach review its relevance in the context of existing security tools and policies and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers decision making process The evidence based cybersecurity approach explained aims to support security professionals policymakers and individual computer users decision making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision makers political financial social and personal experience backgrounds when adopting cybersecurity tools and policies This approach is also a model in which policy decisions are made based on scientific research findings

Cybersecurity Discussion Cases T. Grandon Gill, Cybersecurity affects us all every business school and citizen This book a collection of discussion case studies presents in depth examinations of eleven cybersecurity related decisions facing managers and researchers It is organized around the common cybersecurity framework Identify Protect Detect Respond and Recover It also includes two cases that specifically involve education These cases place the reader in the position of the decision maker featured in each case None of them have a right answer Instead they are specifically designed to 1 Serve as the basis of discussion either in an formal educational context and as part of an industry training program 2 Help participants refine their judgment skills allowing them to make better decisions when encountering similar contexts in their future career
