*The Swami* Ashish, 2015-06-19 Try gauging the stability of a man who does not remember certain period from his past What if this memory loss is due to an accident What if the accident was caused due to his own mistakes Sure he frantically remains disturbed As an adult he wishes to fight for his answers When grown up he wants to grope for the answers When wise he intends understanding the answers Now his intent is on the beyond Let his fellow men not suffer like him What happens if a society is subjected to similar phenomena What happens if a nation suffers from such past India represents the longest continuing civilization in the world India represents the eastern thought the eastern mind India has been subjected to abovementioned accidents Swami Sad Chidananda lived to see them through Many joined him driven to look for the answers to these perennial questions Genuine questions only dequestioned them Now the answers were not needed The questions were not there anymore Collectively they learnt that this was the universal human story They experienced the development of the classical eastern mind and learnt that the classical western mind evolved too only to embrace each other

Linguistic Influences on Mathematical Cognition Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language
