#### Structural levels

Studying the human body at the structural level involves understanding the following levels:

- 1. **Chemical level** - study of the chemical composition of the body.
- 2. **Cellular level** - study of the structure and function of cells.
- 3. **Tissue level** - study of the structure and function of tissues.
- 4. **Organ level** - study of the structure and function of organs.
- 5. **System level** - study of the structure and function of body systems.
- 6. **Whole body level** - study of the structure and function of the entire body.

### CELLS AND TISSUES

Cells are the basic units of structure and function of the body.

#### Organization of cellular levels

Cells are organized into tissues, which are organized into organs.

Organs are organized into systems, which are organized into the body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Whole body level** - study of the structure and function of the entire body.

The **epithelium** is the outermost layer of cells that covers the body.

It is composed of cells that are arranged in a regular pattern.

Epithelial cells are found in the skin, lining of the digestive tract, and other organs.
