Combination McIntosh Battery & Optical Co,1895 **The Anatomy Museum** Elizabeth Hallam,2008 Anatomy museums around the world showcase preserved corpses in service of education and medical advancement but they are little known and have been largely hidden from the public eye Elizabeth Hallam here investigates the anatomy museum and how it reveals the fascination and fears that surround the dead body in Western societies Hallam explores the history of these museums and how they operate in the current cultural environment Their regulated access increasingly clashes with evolving public mores toward the exposed body as demonstrated by the international popularity of the Body Worlds exhibition The book examines such related topics as artistic works that employ the images of dead bodies and the larger ongoing debate over the disposal of corpses Issues such as aesthetics and science organ and body donations and the dead body in Western religion and ritual are also discussed here in fascinating depth The Anatomy Museum unearths a strange and compelling cultural history that investigates the ideas of preservation human rituals of death and the spaces that our bodies occupy in this life and beyond

Medicine and Religion in Enlightenment Europe Andrew Cunningham, 2017-03-02 The Enlightenment period here understood as covering the years 1650 to 1789 is usually considered to be a period when religion was obliged to give way to rationality With respect to medicine this means that the religious elements in the treatment and interpretation of diseases to all intents and purposes disappeared However there are growing indications in recent scholarship that this may well be an overstatement Indeed it appears that religion retained many of its customary relations with medicine This volume explores how far and the ways in which this was still the case It looks at this multi faceted relationship with respect to among others medical care and death in hospitals religious vocation and nursing chemical medicine and religion the clergy and medicine the continued significance of popular medicine faith healing dissection and religion and religious dissent and medical innovation Within these significant areas the volume provides a European perspective which will make it possible to draw comparisons and determine differences

Architecture and the Sciences Antoine Picon, Alessandra Ponte, 2003-05 Since antiquity the sciences have served as a source of images and metaphors for architecture and have had a direct influence on the shaping of built space. In recent years architects have been looking again at science as a source of inspiration in the production of their designs and constructions. This volume evaluates the interconnections between the sciences and architecture from both historical and contemporary perspectives. *Architecture and the Sciences* shows how scientific paradigms have migrated to architecture through the appropriation of organic and mechanical models. Conversely, architecture has provided images for scientific and technological discourse. Accordingly, this volume investigates the status of the exchanges between the two domains. Contents include: Alessandra Ponte, Desert Testing; Martin Bressani, Violet le Duc's Optic; Georges Teyssot, Norm and Type Variations on a Theme; Reinhold Martin, Organicism's Other; Catherine Ingraham, Why All These Birds; Birds in the Sky; Birds in the Hand; Antoine Picon, Architecture Science Technology and the Virtual Realm; and Felicity Scott, Encounters with the Face of America.
