Demonstrates how early modern women writers such as Margaret Cavendish and Hester Pulter wielded poetics as a tool for scientific work
Anatomical Forms excavates the shared material practices of women's poetic work and anatomical study in early modern England
Asserting that poetry is a dimensional technology Whitney Sperrazza demonstrates how women writers wielded poetics as a tool for scientific work in order to explore and challenge rapid developments in anatomy and physiology
In the sixteenth and seventeenth centuries anatomists were actively exploring the best ways to represent bodies in texts to translate the work of the dissection room into the pages of books
When we recognize Renaissance anatomy as fundamentally a book making project Sperrazza insists we find a complex and expansive history of anatomy in the pages of women's poetry
Women poets have long been absent from histories of literature and science but by shifting our focus from content to form Sperrazza reveals complex engagements with questions on corpse preservation dissection obstetrics and gynecology and skin theory in the poetry of Margaret Cavendish Aemilia Lanyer Mary Wroth Mary Sidney Herbert and Hester Pulter
Through close formal analysis and original research on early modern anatomy treatises Anatomical Forms weaves together critical conversations in poetics book history the history of science and women's writing
Sperrazza challenges her readers to imagine science differently to understand that science might not always look like we expect it to look and in the process brings into focus a feminist history of poetic form centered on material practice
