

**THE SKELETON**  
The skeleton is the framework of the body, supporting the soft organs and providing a point of attachment for the muscles. It is composed of the skull, spine, rib cage, and the bones of the upper and lower limbs. The skeleton is made of bone, a hard, white, mineralized tissue that is constantly being renewed. Bone is made up of organic matter, inorganic matter, and water. The organic matter is the collagen, which gives bone its flexibility. The inorganic matter is the mineral salts, which give bone its hardness. The water is the fluid that fills the spaces between the bone cells.

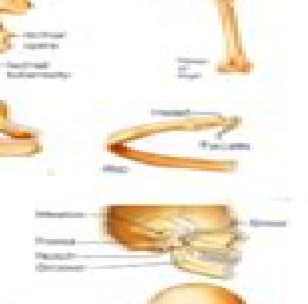

**THE MUSCLES**  
The muscles are the soft tissue that contracts and relaxes to move the body. They are attached to the bones by tendons. The muscles are made of muscle fibers, which are long, cylindrical cells with a striated appearance. The muscle fibers are surrounded by a membrane called the sarcolemma. The sarcolemma is covered by a layer of connective tissue called the epimysium. The muscle fibers are connected to each other by gap junctions, which allow them to contract as a unit.

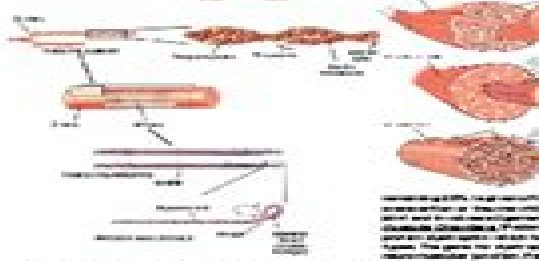

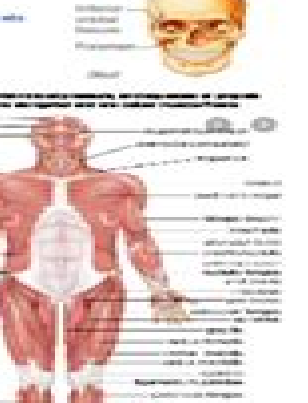

**THE JOINTS**  
The joints are the points where two or more bones meet. They allow the bones to move relative to each other. There are three main types of joints: fibrous joints, cartilaginous joints, and synovial joints. Fibrous joints are made of dense connective tissue. Cartilaginous joints are made of cartilage. Synovial joints are made of a fluid-filled cavity between the bones.

**THE NERVOUS SYSTEM**  
The nervous system is the control system of the body. It is made up of the brain, spinal cord, and nerves. The brain is the central part of the nervous system. The spinal cord is the long, thin, tube-like structure that runs down the back. The nerves are the fibers that carry messages between the brain and the rest of the body. The nervous system is responsible for controlling the body's movements, sensations, and thoughts.

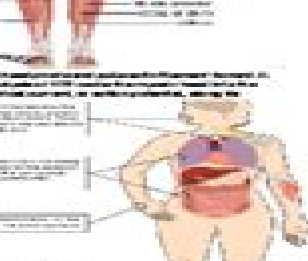

**THE CIRCULATORY SYSTEM**  
The circulatory system is the system that transports blood throughout the body. It is made up of the heart, blood vessels, and blood. The heart is the central pump of the circulatory system. The blood vessels are the tubes that carry the blood. The blood is the fluid that carries oxygen and nutrients to the cells of the body. The circulatory system is responsible for maintaining the body's temperature, pH, and fluid balance.

**THE IMMUNE SYSTEM**  
The immune system is the system that defends the body against disease. It is made up of the white blood cells, antibodies, and the organs of the immune system. The white blood cells are the cells that fight off the invading pathogens. The antibodies are the proteins that bind to the pathogens. The organs of the immune system are the thymus, spleen, and lymph nodes. The immune system is responsible for protecting the body from infection and disease.

**THE ENDOCRINE SYSTEM**  
The endocrine system is the system that controls the body's metabolism and growth. It is made up of the glands that secrete hormones. The hormones are the chemical messengers that travel through the bloodstream to the target organs. The endocrine system is responsible for regulating the body's energy levels, growth, and development.
