

Important Ideas:

LT#1 Predictions

$$\hat{y} = a + bx$$

↑ predicted ↑ y-int ↑ slope

* Be careful of extrapolation.

LT#2 Residuals

Residual = Actual - Predict.

$$R = A - P$$

"The actual context was residual above/below the predicted value for x = #."

LT#3 y-int & Slope

y-int: "When x=0 context the predicted y-context is y-int."

Slope: "With each additional x-context the predicted y-context increases/decreases by slope."

Check Your Understanding:

Michael is a runner. He uses his Apple watch to keep track of his distance and the number of calories he burns for 20 runs. A scatterplot of y = calories burned and x = distance (in miles) shows a fairly strong, positive linear relationship. The regression equation $\hat{y} = 20 + 160x$ models the data fairly well.

a. Interpret the slope of the regression line.

With each additional mile run, the predicted number of calories burned increases by 160 calories.

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity
