

Chapter 12: Tectonics, Earthquakes, and Volcanism

1. Be able to describe the formation of continental crust

slow → millions of yrs of activity
 endogenic processes → uplift, new land forms
 new mountains → plate boundaries
 uplift crustal regions → 3 categories

residual mountains and stable continental cratons
 tectonic mountains + (volcanic landforms)

a. Continental shield, terranes

craton → nucleus of continents, where it grows (old, stable, low elevation + relief)
 continental shield: carbon exposed @ surface
 continental platform: layer young sedimentary rock surrounding shields

b. Crustal formation and deformation – folding, types of faults and their characteristic landforms

crustal formation

crustal deformation

stress → any force affects an object

Folding → when rocks deformed due to compressional stress + shortening

anticline
 syncline
 axial plane
 turns + fault
 isocline

Basin – subsiding area, uplifted, erodes over time in center
 shield – outside, vegetation – center

Dome – anticline area, uplift rock strain, heavily eroded, erosion center resembles bell end

strain → how rock responds to stress measuring stretch, shorten, + turn from stress

2 processes

Folding (bending) compression / amount of pressure

Faulting (breaking)
 (tension)

Normal fault

- rock pull apart
 - moves vertically

(compression)

Reverse fault

- rock move upwards
 Thrust fault

Strike slip fault

horizontal move.
 local left/right move.
 transform plate boundary

The Regulation of Peace River Michael Church, 2014-12-31 This book presents a comprehensive overview of the first longitudinal study of the downstream response of a major river to the establishment of a large hydropower facility and dams Peace River a northward flowing boreal river in northwestern Canada was dammed in 1967 and the book describes the morphological response of the 1200 km downstream channel and the response of riparian vegetation to the change in flow regime over the first forty years of regulated flows Beginning with a description of the effect of regulation on the flow and sediment regimes of the river the book proceeds to study changes in downstream channel geometry on the main stem on the lowermost course of tributaries and on the hydraulic geometry the overall morphology of the channel and riparian vegetation succession The river is subject to annual freeze up and break up so a chapter is devoted to the ice regime of the river A chapter compares the effects of two extraordinary post regulation flood events The penultimate chapter presents a prediction of the ultimate equilibrium form of the regulated river based on rational regime theory An online database of all the main

observations will provide invaluable material for advanced students of river hydraulics and geomorphology This book carefully brings together a range of studies that have been previously inaccessible providing a rare and comprehensive analysis of the effects of a big dam on a river a river that itself represents an example of the kind of system that is likely to receive considerable attention in the future from dam engineers and environmentalists An invaluable reference to river scientists hydroelectric power developers engineers and environmentalists Focus on a northward flowing boreal river a type that holds most of the remaining hydroelectric power potential in the Northern Hemisphere Exceptional separation of water and sediment sources permitting study of the isolated effect of manipulating one of the two major governing conditions of river processes and form Unique example of water regulation and both natural and engineered flood flows Detailed study of both morphological changes of the channel and of the riparian vegetation Online data supplement including major data tables and numerous maps Details of the main observations and provides material for problem study by advanced students of river hydraulics and geomorphology are provided

The Environment Chris C. Park, 2001 The second edition of this fully integrated introductory text for courses in environmental studies and physical geography builds on the resounding success of the first edition providing a comprehensive account of modern environmental issues and the physical and socio economic framework in which they are set It explains the principles and applications of the different parts of the Earth s system the lithosphere atmosphere hydrosphere and the biosphere and explains the interrelationships within and between these systems It explores the present environmental crisis examines how the planet Earth fits into the wider universe and explores human environment interactions
