Case Studies in Food Engineering J. Peter Clark, 2009-08-12 One of the best ways for students or practitioners to learn is through real life example In this volume Clark presents several case studies that can be used not only by those currently working in the industry but as a means for sparking discussion in food engineering classes This book has several purposes 1 to serve as a source of information about a representative collection of food processes with which Clark has had experience 2 to convey some practical lessons about process development and plant design and 3 to serve educators as a resource for class problems and discussion The book is organized in three broad sections The first concerns processes that are primarily physical such as mixing The second concerns processes that also involve biochemical changes such as thermal sterilization The third section addresses some broader issues that have not been discussed elsewhere including how to tour a plant how to choose among building a new plant expanding or renovating and how to develop processes

Tools and Methods for Pollution Prevention Subhas K. Sikdar, Urmila Diwekar, 2013-11-11 Difficult ethical and political issues confront the application of scientific and technological solutions for preventing pollution from occurring Often the questions embodying proposed solutions to known problems are ambiguous and no singular solution can exist for all locations Yet the common organizing principle for all solutions to environmental problems must be scientific because only sound science can provide a rational understanding that decision makers can use universally The NATO Advanced Research Workshop ARW on Tools and Methods for Pollution Prevention October 12 14 1998 Prague Czech Republic was designed to

assemble experts from NATO and former socialist countries of Eastern Europe to discuss science based tools and methods either available or in development that can be used to analyze environmental impacts of manufacturing processes and manufactured products The presentations at the workshop were written up specifically for the purpose of this book albeit after peer reviews and thorough revisions Most of the chapters focus on specific method development for designing environmentally benign processes or products Several chapters take a broader view and focus on such designs from an implementation perspective and dwell on ethical conflicts resistance to change because of inertia or inadequate infrastructure and on the lack of resources We placed these chapters at the beginning of the book The volume starts with the overview by Sikdar et al who describe the scope and difficulties of pollution prevention in the manufacturing sectors
