Mathematical and Algorithmic Puzzles Pramod Ganapathi, 2024-05-29 This book presents serious mathematical and algorithmic puzzles that are mostly counterintuitive The presented puzzles are simultaneously entertaining challenging intriguing and haunting This book introduces its readers to counterintuitive mathematical ideas and revolutionary algorithmic insights from a wide variety of topics The presented solutions that are discovered by many mathematicians and computer scientists are highly counterintuitive and show supreme mathematical beauty These counterintuitive solutions are intriguing to the degree that they shatter our preconceived notions shake our long held belief systems debunk our fundamental intuitions and finally rob us of sleep and haunt us for a lifetime Multiple ways of attacking the same puzzle are presented which teach the application of elegant problem solving strategies

Diagrammatic Algebra Chris Bowman, 2025-05-02 Diagrammatic Algebra provides the intuition and tools necessary to address some of the key questions in modern representation theory chief among them Lusztig's conjecture This book offers a largely self contained introduction to diagrammatic algebra culminating in an explicit and entirely diagrammatic treatment of Geordie Williamson's explosive torsion counterexamples in full detail The book begins with an overview of group theory and representation theory first encountering Coxeter groups through their actions on puzzles necklaces and Platonic solids then building up to non semisimple representations of Temperley Lieb and zig zag algebras and finally constructing simple representations of binary Schur algebras using the language of coloured Pascal triangles Next Kazhdan Lusztig polynomials are introduced with their study motivated by their combinatorial properties The discussion then turns to diagrammatic Hecke categories and their associated p Kazhdan Lusztig polynomials explored in a hands on manner with numerous examples The book concludes by showing that the problem of determining the prime divisors of Fibonacci numbers is a special case of the problem of calculating p Kazhdan Lusztig polynomials using only elementary diagrammatic calculations and some manipulation of 5×5 matrices Richly illustrated and assuming only undergraduate level linear algebra this is a particularly accessible introduction to cutting edge topics in representation theory The elementary yet modern presentation will also be
