The Corona Problem Ronald G. Douglas, Steven G. Krantz, Eric T. Sawyer, Sergei Treil, Brett D. Wick, 2014-08-05 The purpose of the corona workshop was to consider the corona problem in both one and several complex variables both in the context of function theory and harmonic analysis as well as the context of operator theory and functional analysis It was held in June 2012 at the Fields Institute in Toronto and attended by about fifty mathematicians This volume validates and commemorates the workshop and records some of the ideas that were developed within The corona problem dates back to 1941 It has exerted a powerful influence over mathematical analysis for nearly 75 years There is material to help bring people up to speed in the latest ideas of the subject as well as historical material to provide background Particularly noteworthy is a history of the corona problem authored by the five organizers that provides a unique glimpse at how the problem and its many different solutions have developed There has never been a meeting of this kind and there has never been a volume of this kind Mathematicians both veterans and newcomers will benefit from reading this book This volume makes a unique contribution to the analysis literature and will be a valuable part of the canon for many years to come

Topics in Operator Theory Joseph A. Ball, Vladimir Bolotnikov, J. William Helton, Leiba Rodman, Ilya M. Spitkovsky, 2011-02-09 This is the first volume of a collection of original and review articles on recent advances and new directions in a multifaceted and interconnected area of mathematics and its applications It encompasses many topics in theoretical developments in operator theory and its diverse applications in applied mathematics physics engineering and other disciplines The purpose is to bring in one volume many important original results of cutting edge research as well as authoritative review of recent achievements challenges and future directions in the area of operator theory and its applications

Fliess, Michiel Hazewinkel, 2012-12-06 Approach your problems from the right end It isn't that they can't see the solution It is and begin with the answers Then one day that they can't see the problem perhaps you will find the final question G K Chesterton The Scandal of Father The Hermit Clad in Crane Feathers in R Brown The point of a Pin van Gulik's The Chinese Maze Murders Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics However the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen

Kressner, Christian Mehl, Tatjana Stykel, 2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra matrix theory differential algebraic equations and control theory These mathematical research areas are strongly related and often occur in the same real world applications The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics This book also reflects some of Volker Mehrmann s major career stages Starting out working in the areas of numerical linear algebra his first full professorship at TU Chemnitz was in Numerical Algebra hence the title of the book and matrix theory Volker Mehrmann has made significant contributions to these areas ever since The highlights of these are discussed in Parts I and II of the present book Often the development of new algorithms in numerical linear algebra is motivated by problems in system and control theory These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III Besides providing a scientific discussion of Volker Mehrmann s work and its impact on the development of several areas of applied mathematics the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra matrix theory differential algebraic equations and control theory

Birtel, 1972 *Methods of Algebraic Geometry in Control Theory: Part I* Peter Falb, 2018-08-25 An introduction to the ideas of algebraic geometry in the motivated context of system theory Thus the author describes his textbook that has been specifically written to serve the needs of students of systems and control Without sacrificing mathematical care the author makes the basic ideas of algebraic geometry accessible to engineers and applied scientists The emphasis is on constructive methods and clarity rather than abstraction The student will find here a clear presentation with an applied flavor of the core ideas in the algebra geometric treatment of scalar linear system theory The author introduces the four representations of a scalar linear system and establishes the major results of a similar theory for multivariable systems appearing in a succeeding volume Part II Multivariable Linear Systems and Projective Algebraic Geometry Prerequisites are the basics of linear algebra some simple notions from topology and the elementary properties of groups rings and fields and a basic course in linear systems Exercises are an integral part of the treatment and are used where relevant in the main body of the text The present softcover reprint is designed to make this classic textbook available to a wider audience This book is a concise development of affine algebraic geometry together with very explicit links to the applications and should address a wide community of readers among pure and applied mathematicians Monatshefte f r Mathematik
