uniform multi facet and multi level collaborative system engineering with heterogeneous computer aided tools such as CAD/CAM/CAE and ERP. This presented unified feature model can be applied to product and process representation development implementation and management. Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real world scenarios. By expanding on well known feature based design and manufacturing approach, Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers, practitioners and students from both academia and engineering field.

Data Warehousing and Knowledge Discovery A Min Tjoa, 2005-09-09. For more than a decade, data warehousing and knowledge discovery technologies have been developing into key technologies for decision making processes in companies. Since 1999, due to the relevant role of these technologies in academia and industry, the Data Warehousing and Knowledge Discovery (DaWaK) conference series have become an international forum where both practitioners and researchers share their findings, publish their relevant results and dispute in depth research issues and experiences on data warehousing and knowledge discovery systems and applications. The 7th International Conference on Data Warehousing and Knowledge Discovery (DaWaK 2005) continued series of successful conferences dedicated to these topics. In this edition, the conference tried to provide the right

logical balance between data warehousing and knowledge discovery Regarding data warehousing papers cover different relevant and still unsolved research problems such as the modelling of ETL processes and integration problems designing OLAP technologies from XML documents modelling data warehouses and data mining applications together improvements in query processing partitioning and implementations With regard to data mining a variety of papers were presented on subjects including data mining techniques clustering classification text documents and classification and patterns These proceedings contain the technical papers that were selected for presentation at the conference We received 196 abstracts and finally received 162 papers from 38 countries and the Program Committee eventually selected 51 papers making an acceptance rate of 31.4 % of submitted papers

Software and Systems Traceability Jane Huang, Orlena Gotel, Andrea Zisman, 2012-02-01 Software and Systems Traceability provides a comprehensive description of the practices and theories of software traceability across all phases of the software development lifecycle The term software traceability is derived from the concept of requirements traceability Requirements traceability is the ability to track a requirement all the way from its origins to the downstream work products that implement that requirement in a software system Software traceability is defined as the ability to relate the various types of software

artefacts created during the development of software systems Traceability relations can improve the quality of a product being developed and reduce the time and cost of development More specifically traceability relations can support evolution of software systems reuse of parts of a system by comparing components of new and existing systems validation that a system meets its requirements understanding of the rationale for certain design and implementation decisions and analysis of the implications of changes in the system

Advanced Digital Preservation David Giarretta, 2011-06-01 There is growing recognition of the need to address the fragility of digital information on which our society heavily depends for smooth operation in all aspects of daily life This has been discussed in many books and articles on digital preservation so why is there a need for yet one more Because for the most part those other publications focus on documents images and webpages objects that are normally rendered to be simply displayed by software to a human viewer Yet there are clearly many more types of digital objects that may need to be preserved such as databases scientific data and software itself David Giarretta Director of the Alliance for Permanent Access and his contributors explain why the tools and techniques used for preserving rendered objects are inadequate for all these other types of digital objects and they provide the concepts techniques and tools that are needed The book is structured in three parts The first part is on theory i e the concepts and techniques that are essential for preserving digitally encoded information The second part then shows practice i e the use and validation of these tools and techniques Finally the third part concludes by addressing how to judge whether money is being well spent in terms of effectiveness and cost sharing Various examples of digital objects from many sources are used to explain the tools and techniques presented The presentation style mainly aims at practitioners in libraries archives and industry who are either directly responsible for preservation or who need to prepare for audits of their archives Researchers in digital preservation and developers of preservation tools and techniques will also find valuable practical information here Researchers creating digitally encoded information of all kinds will also need to be aware of these topics so that they can help to ensure that their data is usable and can be valued by others now and in the future To further assist the reader the book is supported by many hours of videos and presentations from the CASPAR project and by a set of open source software
