The study of the acquired reading disorders though in existence for over a century received enormous impetus with the publication of a seminal paper by Marshall and Newcombe in 1966 leading to neuropsychological model building of reading. Over the last 30 years within the single case study design there has been extensive and exceedingly fine grained research on individuals with acquired disorders of reading in an attempt to establish the validity of these models of reading and the human brain. In addition these models have had considerable influence on models of the acquisition of reading in children and their concomitant difficulties. Much of this research has been in readers of the alphabetic scripts particularly the opaque English script. During the last decade or so there has been increasing evidence particularly in research on reading acquisition that what is true of alphabetic scripts like English may not be universally true of all of the scripts of the world. This has led to considerable research into the process of learning to read and write and on the factors affecting reading which are the touchstone of the models within broader cross linguistic and cross cultural perspectives.

Fundamentals in Handwriting Recognition Sebastiano Impedovo,2012-12-06 For many years researchers in the field of Handwriting Recognition were considered to be working in an area of minor importance in Pattern Recognition They had

only the possibility to present the results of their research at general conferences such as the ICPR or publish their papers in journals such as some of the IEEE series or PR together with many other papers generally oriented to the more promising areas of Pattern Recognition The series of International Workshops on Frontiers in Handwriting Recognition and International Conferences on Document Analysis and Recognition together with some special issues of several journals are now fulfilling the expectations of many researchers who have been attracted to this area and are involving many academic institutions and industrial companies But in order to facilitate the introduction of young researchers into the field and give them both theoretically and practically powerful tools it is now time that some high level teaching schools in handwriting recognition be held also in order to unite the foundations of the field Therefore it was my pleasure to organize the NATO Advanced Study Institute on Fundamentals in Handwriting Recognition that had its origin in many exchanges among the most important specialists in the field during the International Workshops on Frontiers in Handwriting Recognition
