Optical Bistability: Controlling Light With Light Hyatt Gibbs,2012-12-02 Optical Bistability Controlling Light with Light  
 focuses on optical bistability in nonlinear optical systems Emphasis is on passive non laser systems that exhibit reversible  
 bistability with input intensity as the hysteresis variable along with the physics and the potential applications of such systems  
 for nonlinear optical signal processing This book consists of seven chapters and begins with a historical overview of optical  
 bistability in lasers and passive systems The next chapter describes steady state theories of optical bistability including the  
 Bonifacio Lugiato model as well as the boundary conditions of an optical cavity and the coupled Maxwell Bloch equations  
 Both intrinsic and hybrid experiments are then described along with light by light control pulse reshaping and external  
 switching The transient phenomena that arise either from instabilities in the bistable systems themselves or from fluctuations

in the number of nonlinear atoms or in the number of intracavity photons are also considered The final chapter examines the characteristics and fundamental limitations of an ideal device the prospect of improving devices by identifying giant nonlinearities and the utilization of the full power of optics by parallel processing This monograph is intended for new entrants and active workers in the field of optical bistability      Optical Bistability III Hyatt M. Gibbs, Paul Mandel, Nasser Peyghambarian, S. Desmond Smith, 2012-12-06 This is a collection of papers presented at the Topical Meeting on Optical Bistability OB3 held December 2-4 1985 in Tucson Arizona The increase in attendance to almost 200 shows that interest continues to grow in the subject of optical bistability OB and its wider implications both in application to optical digital computing and to basic physics notably instabilities and spatial effects The maturing of the field is evidenced by the fact that the number of experimental papers has caught up with the number of theoretical ones These trends were already apparent in OB2 and the 1984 Royal Society Meeting on Optical Bistability Dynamical Nonlinearity and Photonic Logic Progress in experimental topics included guided wave OB mostly thermal picosecond switching studies on quite a number of new materials optical computing and pattern recognition using arrays of nonlinear etalons Theoretical progress ranged from rather practical calculations on device performance noise effects on switching and transverse and longitudinal spatial effects to fundamental studies of dynamics instabilities and chaos The Conference also included both theoretical ideas on optical computer architecture and intrinsic OB circuit elements such as a full adder as well as the first demonstration of an intrinsic optical circuit in the form of a cascaded loop with buffer stores A first demonstration of a simple pattern recognition algorithm using 2-D arrays of spots on a ZnSe interference filter was reported      **Radiation Effects on Fiber Optics and Opto Electronics** IGIC, Inc.
