Anderson,2003 A folk taxonomy is a semantic field that represents the particular

way in which a language imposes structure and order upon the myriad impressions of human experience and perception Thus for example the experience of color in modern English is structured around an inventory of twelve basic color terms but languages vary in the number of basic color terms used from thirteen or fourteen terms to as few as two or three Anthropological linguists have been interested in the comparative study of folk taxonomies across contemporary languages and in their studies they have sometimes proposed evolutionary models for the development and elaboration of these taxonomies The evolutionary models have implications for historical linguistics but there have been very few studies of the historical development of a folk taxonomy within a language or within a language family Folk Taxonomies in Early English undertakes this task for English and to some extent for the Germanic and Indo European language families The semantic fields studied are basic color terms seasons of the year geometric shapes the five senses the folk psychology of mind and soul and basic plant and animal life forms Anderson's emphasis is on folk taxonomies in Old and Middle English and also on the implications of semantic analysis for our reading of early English literary texts Blue in Old English Carole Patricia Biggam,1997 Blue in Old English represents the first thorough investigation of an area of the colour semantics of Old English and the methodology developed for this study is believed to be appropriate for researching the colour semantics of any language which survives only in recorded texts By means of a collection of in depth word studies which suggest new interpretations of many well known passages an understanding of how blueness was described in Old English is developed The approach is interdisciplinary using evidence from subjects such as botany manuscript illustration etymology early technologies and others The conclusion contradicts certain previously held views on Old English colour and presents a hitherto obscured sociolinguistic picture of differing language use among various groups of Old English speakers
