Bent, E.B. Bennion, G.S.T. Bamford, 2013-03-09 The popularity of the 1973 fifth edition of *The Technology of Cake Making* has continued in many of the English speaking countries throughout the world This sixth edition has been comprehensively revised and brought up to date with new chapters on Cream butter and milkfat products Lactose Yeast aeration Emulsions and emulsifiers Water activity and Reduced sugar Eggs and egg products Baking fats and lower fat goods The chapters on Sugars Chemical aeration Nuts in confectionery Chocolate Pastries Nutritional value and Packaging have been completely rewritten The increased need for the continuous development of new products does not of necessity mean that new technology has to be constantly introduced Many of the good old favourites may continue to be produced for many years and they form suitable bench marks for new product development The sixth edition introduces the use of relative density to replace specific volume as a measure of the amount of aeration in a cake batter the use of relative density is in line with international agreement Specific volume is kept as a measurement of baked product volume since the industry is comfortable with the concept that subject to an upper limit an increase in specific volume coincides with improvement in cake quality **Chocolate, Cocoa and Confectionery: Science and Technology** Bernard Minifie, 2012-12-06 The second edition of this book achieved worldwide recognition within the chocolate and confectionery industry I was pressed to prepare the third edition to include modern developments in machinery production and packaging This has been a formidable task and has taken longer than anticipated Students still

require in one book descriptions of the fundamental principles of the industry as well as an insight into modern methods. Therefore parts of the previous edition describing basic technology have been retained with minor alterations where necessary. With over fifty years experience in the industry and the past eighteen years working as an author, lecturer and consultant, I have collected a great deal of useful information. Visits to trade exhibitions and to manufacturers of raw materials and machinery in many parts of the world have been very valuable. Much research and reading have been necessary to prepare for teaching and lecturing at various colleges, seminars and manufacturing establishments. The third edition is still mainly concerned with science, technology and production. It is not a book of formulations which are readily available elsewhere. Formulations without knowledge of principles lead to many errors and recipes are given only where examples are necessary. _ Analytical methods are described only when they are not available in textbooks of which there are many on standard methods of food analysis.

Acknowledgments I am still indebted to many of the persons mentioned under Acknowledgments in the second edition. I am especially grateful to the following
