

The Princess Fairy

The Princess Fairy flies at night,
Her dress has diamonds dazzling bright.
Her crimson curls glow on her gown,
As from the stars she flutters down.

She comes to children in their beds,
And waves her wand above their heads.
She helps them have delightful dreams,
Of fresh fruit frappes and crispy creams.

Of toads that talk and tell tall tales,
Of worms that walk and skunks with sails.
Of rams that read and wrens that write,
Of sloths that speed and buttercups that bite.

Of fish that fly and snakes that sing,
Of purple pie and roses that ring.
Of pigs with pails and sheep with shells,
Of super snails and bugs with bells.

The Princess Fairy flies at night,
So make sure you are tucked in tight.

Sarojini Naidu's Poetry Satvinder Kaur, 2003 Nineteenth-Century Poetry and the Physical Sciences Gregory Tate, 2020-06-17 Poetical Matter examines the two way exchange of language and methods between nineteenth century poetry and the physical sciences The book argues that poets such as William Wordsworth Mathilde Blind and Thomas Hardy identified poetry as an experimental investigation of nature's materiality It also explores how science writers such as Humphry Davy Mary Somerville and John Tyndall used poetry to formulate their theories to bestow cultural legitimacy on the emerging disciplines of chemistry and physics and to communicate technical knowledge to non specialist audiences The book's chapters show how poets and science writers relied on a set of shared terms form experiment rhythm sound measure and how the meaning of those terms was debated and reimaged in a range of different texts A stimulating analysis of nineteenth century poetry and physics In this groundbreaking study Tate turns to sound to tease out fascinating continuities across scientific inquiry and verse Reflecting that the processes of the universe were themselves rhythmic he shows that a wide range of poets and scientists were thinking through undulatory motion as a space where the material and the immaterial met The motion of waves Tate demonstrates was the exemplary form in the physical sciences Sound waves light energy and poetic meter were each characterized by a process of undulation that could be understood as both a physical and a formal property Drawing on work in new materialism and new formalism Tate illuminates a nineteenth century preoccupation with dynamic patterning that characterizes the undulatory as in John Herschel's words not things but forms Anna Hinchman Associate Professor of English at Boston University USA This impressive study consolidates and considerably advances the field of physics and poetry studies Moving easily and authoritatively between canonical and scientist poets *Nineteenth Century Poetry and the Physical Sciences* draws scientific thought and poetic form into telling relation disclosing how they were understood variously across the nineteenth century as both comparable and competing ways of knowing the physical world Clearly written and beautifully structured *Nineteenth Century Poetry and the Physical Sciences* is both scholarly and accessible a fascinating and indispensable contribution to its field Daniel Brown Professor of English at the University of Southampton UK Essential reading for Victorianists Tate's study of nineteenth century poetry and science reconfigures debate by insisting on the equivalence of accounts of empirical fact and speculative theory rather than their antagonism The undulatory rhythms of the universe and of poetry the language of science and of verse come into new relations Tate brilliantly re-reads Coleridge Tennyson Mathilde Blind and Hardy through their explorations of matter and ontological reality He also addresses contemporary theory from Latour to Jane Bennett Isobel Armstrong Emeritus Professor of English at Birkbeck University of London UK Great Grammar Lessons that Work Lee Karrow, 2000 A hands on discovery mode of teaching English grammar using a variety of techniques **The Plays and Poems of William Shakespeare: *Two gentlemen of Verona.
