The Very Big, the Very Fast, and the Very Small: The new physics simplified Clayton Lagerquist, 2007-04-16 Clayton Lagerquist is an amateur physicist with a degree in physics from Minnesota State University and a graduate degree in engineering from the University of Minnesota He is now retired from an active career in health physics while maintaining his readings in cosmology relativity and quantum mechanics He hopes to bring some of his knowledge of the latest findings in physics to those who are discovering some of these wonders for the first time His candor about his lack of knowledge in some areas may spur others to investigate these areas in more detail for themselves *Almost Everyone's Guide to Science* John Gribbin, 2015-09-24 John Gribbin is one of the few science writers who is equally comfortable writing about biology as he is about physics and this beginner's guide will take the reader through the basics and the fundamental issues of the crucial areas of modern science from the birth of the universe through to the evolution of our own species the nature of human behaviour and the workings of our minds Crucially the book will not only provide an overview of the central areas in a single volume but will also explain how the areas link up what evolutionary theory has to say about how we think how sub atomic particles came into being in the Big Bang and atoms in stars Energy and the Unexpected Keith James

Laidler, 2002 From the steam engine to $E=mc^2$ and beyond the concept of energy offers an essential key to our understanding of the Universe In this entertaining and highly readable book Professor Laidler explains the concept of energy and its characteristics as they have been discovered over the past two centuries Having looked at energy on a small scale and then on the scale of the Universe itself he shows the link with chaos theory according to which the unexpected is inevitable
