Geology and Plant Life Arthur R. Kruckeberg,2004 This title the result of more than 40 years of research into the question of why certain plants grow on certain soils and certain terrain structures and what happens when this relationship is disrupted by human agents It draws on case histories from around the world Tropical Alpine Environments Philip W. Rundel,Alan P. Smith,F. C. Meinzer,1994-09 Plants growing in tropical alpine environments at altitudes above the closed canopy forest and below the limit of plant life have evolved distinct forms to cope with a hostile environment characterized by cold drought and fire Unlike temperate alpine environments where there are distinct seasons of favourable and unfavourable conditions for growth tropical alpine habitats present summer conditions every day and winter conditions every night Using examples from all over the tropics this fascinating account reviews for the first time the unique form and functional relationships of tropical alpine plants examining both their physiological ecology and population biology It will appeal to anyone interested in tropical vegetation and plant physiological adaptations to hostile environment as well as to researchers in biogeography and ecology The Plant Life of China Geoffrey P. Chapman,Yin-Zheng Wang,2013-06-29 Chinese plant life is estimated to include up to 30 000 species and extends from the Himalayan snow line across a diversity of habitats to the lush tropical south It is embraced by a culture going back more than 3000 years providing plants for medicinal use and some of the most valued horticultural species Although for many years access to Chinese plants was limited the present situation provides an opportunity for a new and authoritative assessment of such botanical treasure houses as Yunnan and Sichuan
